Thank you for the tip !! cheers bro

alora247 - October 1, 2013, 5:47 am

I tried this it worked but tried to run the file which I have converted and it didnt execute.

01234567890 - October 1, 2013, 12:29 pm

You can even make your file extension visible under folder option.Anyway thanks for sharing the method!

T e s s e r a c t - October 1, 2013, 2:28 pm

Yes, this is because you simply need to rename the file after it has been transferred over to a second source. Thus, the system will recognize it as the file extensions you alter it to, so .DOCX files are primarily opened with Microsoft Word. Understand?

(Sep 22, 2013 02:31 PM)holako Wrote: [\[CITE\]](#) Thank you for the tip !! cheers bro

It is my pleasure.

Also, you can edit the registry and alter a few ones and zero values to make it show the file extension ?

alora247 - October 1, 2013, 3:14 pm

no bro can u gimme ur skype maybe u show me on TV, it is very knowledgeable

Another time, it is pretty simple if you Google it. I guarantee it.

I am busy extracting a license key from my school laptop, I want to use it on my own.

zetustiger - October 5, 2013, 2:14 pm

hmmm but wouldnt the man have to rename it again to turn it into an exe again?

T e s s e r a c t - October 5, 2013, 2:16 pm

(Oct 5, 2013 02:14 PM)zetustiger Wrote: [\[CITE\]](#) hmmm but wouldnt the man have to rename it again to turn it into an exe again?

That is precisely the point of this leak, is so they rename the file themselves back to the previous extension. Remember, we are not trying to infect anybody, but simply bypass the file attachment filter.

Parkinger - October 5, 2013, 3:26 pm

Didn't know this, bookmarked thank you

thank you bro ;) Now I know about exploit

poiuytreza - November 7, 2013, 7:55 pm

Isn't there any method to change extention send by mail and execute the file without renaming it again to .exe?

T e s s e r a c t - November 7, 2013, 9:05 pm

(Nov 7, 2013 08:55 PM)poiuytreza Wrote: [\[CITE\]](#) Isn't there any method to change extention send by mail and execute the file without renaming it again to .exe?

There is a way to spoof it, but the file will:

Not run properly, as it is trying to be opened by the renamed file extension's default program.

Not in its own correct file extension.

Look like something the lines of: armageddon.exe.pdf

Therefore, that is pointless. The whole purpose is to send the file to another user, not to infect them - unless you explain to them how to reverse the process then run the file ? ?

poiuytreza - November 7, 2013, 10:05 pm

Oke, thank you for explaining this method.

But I'm in search for rather something else ;-).

So I don't have to explain how to reverse the process :)

btw, thank you for this tut.

BIACkmAMbALA - November 17, 2013, 7:39 pm

nice update but its kinda slow

not everybody can do rename

davinchycode - January 5, 2014, 6:47 am

Nice tutorial. it is nice u sharing with us. Thanks

shaw112170 - March 4, 2014, 10:34 pm

thanks that helped a lot... keep up the good work dude

T e s s e r a c t - March 5, 2014, 8:24 am

I'm glad everyone's enjoying the miniploit.

Even though google updated the GUI, it still works. Questions? PM me.

blackvudu1 - May 2, 2014, 9:10 pm

You can change the extension when your target download, keep one thing in mind it wont execute like it wont one your own system after changing extension

T e s s e r a c t - May 3, 2014, 1:11 pm

It works when you change the extension back. I do not remember having the file extension changed back to what it was originally not working as I've described in my instructions. It doesn't alter the file. And you are wrong. ?
