Thread: [are keyloggers detectable?](#)

hakenz - September 23, 2013, 4:56 pm

If keyloggers are detectable.. then how can you make it undetectable? - do you have to buy a crypter like to crypt your RAT Server?

mooimagoat - September 23, 2013, 5:52 pm

i believe you have to crypt it like a RAT

Thrydon - September 23, 2013, 6:07 pm

Yeah they get detected by AV's. Some people will keep their keyloggers FUD by releasing updates, but when they get detected you will have to use a crypter to keep your file from being detected.

g3h34 - September 25, 2013, 8:42 pm

u must use a hardware keylogger ;-)

Tastylicious - September 25, 2013, 11:30 pm

Yeah sure retard, and then spread it in your botnet right?

I feel good - September 27, 2013, 6:52 pm

Yes like rat

So you have 2 options crypt by your self or buy crypter just make sure before buy the crypter work with your keylogger or your stealer

so now how do I make my own crypter?

Dr. Snowball - September 27, 2013, 8:53 pm

Depends on the keylogger, some already crypted or you can get a crypter.

stdio - September 29, 2013, 9:38 am

If you buy a keylogger, it will stay FUD for sometime.

After that updates are also provided.

You can buy a crypter too but it also gets detected after sometime.

R3hl6 - October 5, 2013, 7:15 am

There are FUD keyloggers and there are UD, try crypting your server.
