Thread: [Start JAR from resource with handler](#)

hansbald - September 28, 2013, 11:24 am

Hello HF,

A quick question:

Is it possible to store a JAR file in the resources.
Then invoke a function in this JAR file with parameter,
and then return the strings the JAR-Function returns.

Like:

VB.net send Input to JAR - JAR gives output vb.net

Don't want some C&P code I want some words/calls whatever to research or examples to learn from :)

Thanks to all~
Dustin

Well partially yes thats possible, you can see here how you can wrap around a process
<https://hackforums.net/showthread.php?tid=3738215>

That was a minecraft server JAR file that runs inside (or wrapped) the main application as forked process.

Thanks for the input I will look through the code :)

Ok, I now know how to create and interact with it as a process. But can I do this in a RunPE?

hansbald - September 30, 2013, 8:54 am

Push any more suggestions?

I understood the wrapper code but can't use it in a RunPE...

TheBarret - September 30, 2013, 9:57 am

Hmm... you where not specific in the first post now you start flapping about runpe, i dont see how that is gonna work on a jar files. java apps are compiled bytecode that run on jvm (Java virtual machine). So my awnser is no.
