Thread: [Tutorial = How to perform a Man in the middle attack aka attack phone and computers](#)

MrPenguinTM - September 30, 2013, 3:48 am

Okay so first sorry for my bad grammar, I'm on a mini-laptop and yeah cba to so this perfect D:
==

Okay so a MITMA for sort is where you make your android phone acts like a router, so all there data passes through your phone and you can make copies of this data and also control there device.

So first you have to root your device, I can't show you as there are so many of these program to do this for many phones. I own a tablet and this is where I perform my attacks :d.

After you have rooted you're phone download this program, this no virus or any harmful tool to your device. LINK: <http://dsploit.net/>.

After you have done this please go to a WiFi hot spot for any shop or place where they do this kind of stuff like KFC Mc'Ds and stuff like this, you can really screw with people.

There should be a scan button. Scan for the router and connect then you should get a list of peoples devices, you can even fuck around with the router and turn off the the router or freeze this.
[img]<http://www.xda-developers.com/wp-content/uploads/2012/10/1.png>[/img]

When your ready to attack someones phone, please click there device name and there should be a list of options ready to take like Hijacking and photo changer all of this.

Sorry for the low Hq tutorials but as I said am new and on a netbook.

If you like this please comment and don't leach this is my own tutorial made :D

Yes this program is awesome, but well, to bad you can't steal the passwords from the https sites, or it doesn't work with your 3G/4G mobile connection, so lets say you make a hotspot with your mobile over your 3G net mobile, then it wont work :(Maybe the cookie sniffing will work for https sites !
