Thread: [Neobux Ad Clicker + Adprize Viewer - It's back!](#)

Dark Sniper - October 2, 2013, 3:42 pm

It has been a while since I updated this. My last thread was glitched (to many pages), and it was trashed :(.

This is a free release to everyone. I'm not even going to put it into and adf.ly link.

Here is the whole program :

http://www.filedropper.com/showdownload.php/neobux11_1

Changes :

Updated script to fix problem most people had.

To run this code you must download a compiler.

In this case the code has been written specifically for the program Simba.

Available here : <http://wizzup.org/simba/>

Direct link without the info : <http://simba.villavu.com/bin/Release/Current/SimbaInstaller.exe>

Instructions:

1. Download and Install Simba.
2. Open up neobux 1.1.simba file.
3. Make sure you are already signed into neobux.
4. Go to Tools->Update and make sure Simba is up to date.
4. Press the play, or Script > Run, or simply press F9.

I Have been using this for over 3 years and never been banned.

Any question?

Sorry about thread being so plain.

Use at your own risk. There is always a possibility of being banned, but I highly doubt it.

Note:

Thread is for educational purposes only.

Use program using your own judgement.

:) ???ø? :) - October 2, 2013, 3:49 pm

How much can you make? From the ad clicking?

Dark Sniper - October 2, 2013, 3:52 pm

(Oct 2, 2013 03:49 PM)Turd. Wrote: [\[CITE\]](#) How much can you make? From the ad clicking?

Between \$0.03 - \$0.08 every day. Depends on if you have a membership package with them or not.

Then it's random with adprize I have won \$2.

I use it to keep my income from refs coming in.

:) ???ø? :) - October 2, 2013, 3:56 pm

(Oct 2, 2013 03:52 PM)Dark_Sniper Wrote: [\[CITE\]](#) Between \$0.03 - \$0.08 every day. Depends on if you have a membership package with them or not. Then it's random with adprize I have won \$2. I use it to keep my income from refs coming in. kk mate thanks anyway and good release.

¥Per\$isten¢e¥ ?? - October 2, 2013, 4:20 pm

Lol have fun getting banned broski not gonna last too long

Dark_Sniper - October 2, 2013, 5:35 pm

(Oct 2, 2013 04:20 PM)¥Per\$isten¢e¥ ?? Wrote: [\[CITE\]](#) Lol have fun getting banned broski not gonna last too long

Yes it's possible. You do something against the rules a website has set it is always possible to be banned.

Hasn't happened with this script yet. Very human like. I highly doubt anyone will be banned--But like I said it is possible.

QuickYT - October 2, 2013, 5:55 pm

this could be very useful to me in the future. thanks man

Akreycic - October 2, 2013, 9:08 pm

This seems like a quick way to get banned..

Dark_Sniper - October 2, 2013, 9:08 pm

You welcome.

If anyone has issues with the script please post here and let me know. Please give as much detail as you can about the issue.

Meowkachu - October 2, 2013, 10:51 pm

Just skimmed through the code and kinda read what you posted. I don't currently have a neobux account set up, but I might try this. I will test tonight and post back tomorrow. (if I remember)

Dark_Sniper - October 3, 2013, 4:43 am

(Oct 2, 2013 09:08 PM)Akreyic Wrote: [\[CITE\]](#) This seems like a quick way to get banned.. I have been using it without being banned.

I doubt someone would be banned for using this, but then again there is a possibility. Just thought I would give something to this community again.

flowan - October 4, 2013, 4:31 pm

hi there i'm pretty much a newbie here and also in programming i should say.

and i followed your instruction but the problem is : even if i copy and paste your code i don't know what i have to put between the lines "begin" and "end"... (numbers for var and const i guess but i have some issues with the tutorials of simba (can't access to them) and youtube didn't gave me any help)

Could you give me some help?

Argyle - October 4, 2013, 7:05 pm

Why do people need bots for PTC sites? Does taking 5 minutes out of your day really out of your way to create/use a bot for it?

Dearbone - October 4, 2013, 7:38 pm

I have also written a code in Pascal for a compiler named: scardivi....working fine and undetected since 2 years now for myself but have not released it to fear of getting banned while too many people using it. it works similar to this code (what i have read, but not tested :))

Great job and people should give it a try ;)

But btw. neobux is changing the star to a christmas tree or heart at certain events (like christmas or valentinesday) there u have to change the code a little bit =)

Football - October 4, 2013, 7:43 pm

I installed it. When i press f9 this message comes up!!

"Exception in Script: Block expected at line 1, column 2"

What is that my friend

DyS- - October 5, 2013, 1:55 am

I just keep getting - Exception in Script: Operator expected at line 35, column 3

Any idea on how to fix this?

Ryntar - October 5, 2013, 2:41 am

Don't work with firefox it clicks the "Firefox" menu, if I manually click on the ad page it works but gets " Error cannot find closing button

Successfully executed.

The following bitmaps were not freed: [0, 1, 2, 3, 4, 5, 6, 7, 8, 9]

"

kendruck lemur - October 5, 2013, 7:00 am

Can you please send me some extra help on how to put the code into simba? would be nice.

FixmeH - October 5, 2013, 7:07 am

Gotta try this. thanks for sharing man!

xmidnightxlonerx - October 5, 2013, 7:20 am

"Exception in Script: Operator expected at line 34, column 3"

Thats what it says when I tried to run it.

FixmeH - October 5, 2013, 9:56 am

Not working, more instructions please?

Dark_Sniper - October 5, 2013, 6:30 pm

Okay... Sorry I was out for a day.

I will update the thread with a .simba file that will automatically load into the simba program.

Updated!

Would anyone mind if I did put this through adf.ly?

This way I can keep track of how many downloads and make a few cents off it.

xmidnightxlonerx - October 5, 2013, 6:58 pm

Ive updated Simba and I still get this error:

"Exception in Script: Operator expected at line 50, column 7"

I did download the full program you edited into the OP but I still am having troubles

___GS___ - October 5, 2013, 7:04 pm

Yeah I'm not having any lucky with it either, I keep getting this back.

Quote:Exception in Script: Operator expected at line 50, column 7

Dark_Sniper - October 5, 2013, 7:12 pm

(Oct 5, 2013 07:04 PM)Goldsound Wrote: [\[CITE\]](#) Yeah I'm not having any lucky with it either, I keep getting this back.

Can someone try running this code for me quickly then ?

Code begin

KeyDown(VK_F5)

Wait(200);

KeyUp(VK_F5)

end.

make sure there is no text within simba when pasting.

What this should do it press the F5 key and reload your web page.

___GS___ - October 5, 2013, 7:33 pm

(Oct 5, 2013 07:12 PM)Dark_Sniper Wrote: [\[CITE\]](#) Can someone try running this code for me quickly then ?

Still no luck, I got this back. Maybe it's a pc issue.

Quote:Exception in Script: Operator expected at line 3, column 3

Dark_Sniper - October 5, 2013, 7:37 pm

Code begin

KeyDown(VK_F5);

Wait(200);

KeyUp(VK_F5);

end.

Try that.

I'm looking into it.

I'M SORRY GUYS!

try this -

Tools->Update

I told you the wrong update!

Layla - October 5, 2013, 8:43 pm

I'm getting "Exception in Script: Operator expected at line 50, column 7". Weird.

Dark_Sniper - October 5, 2013, 10:32 pm

(Oct 5, 2013 08:43 PM).Deadmau5 Wrote: [\[CITE\]](#) I'm getting "Exception in Script: Operator expected at line 50, column 7". Weird.

I'm really trying to figure out why everyone is having this problem and I am not.... anyone report that it's working?

Layla - October 5, 2013, 10:35 pm

(Oct 5, 2013 10:32 PM)Dark_Sniper Wrote: [\[CITE\]](#) I'm really trying to figure out why everyone is having this problem and I am not.... anyone report that it's working?

I don't know anything about code, but can you compile your version into a .exe? Maybe you mistyped something on the code we got or if there's a specific thing for different pc's that you need to change.

helliskool19 - October 5, 2013, 11:28 pm

thanks for the nice release, I can't bot anyways.

Dark_Sniper - October 6, 2013, 7:04 am

(Oct 5, 2013 10:35 PM).Deadmau5 Wrote: [\[CITE\]](#) I don't know anything about code, but can you compile your version into a .exe? Maybe you mistyped something on the code we got or if there's a specific thing for different pc's that you need to change.

This can't be compiled into an EXE.

I have uninstalled simba and personally followed my instructions and didn't have a problem.

It does looke like "VK_F5" does not work for for all computers.

EDIT

I believe I fixed the problem if people wish to give it another try.

xmidnightxlonerx - October 6, 2013, 8:37 am

I just re-downloaded and tried again for you, but I still receive the same error:

"Exception in Script: Operator expected at line 50, column 7"

shemikle - October 6, 2013, 9:05 am

(Oct 6, 2013 08:37 AM)xmidnightxlonerx Wrote: [\[CITE\]](#) I just re-downloaded and tried again for you, but I still receive the same error:

I just ran it and it ran successfully OP. Hopefully this helps.

Dark_Sniper - October 6, 2013, 9:18 am

FIXED.

Please go back to main post to re-download.

paggle - October 6, 2013, 9:55 am

I would be glad if you could release a Linux version so I can bot 24/7 on my raspberry Pi :).

Dark_Sniper - October 6, 2013, 9:56 am

(Oct 6, 2013 09:55 AM)paggle Wrote: [\[CITE\]](#) I would be glad if you could release a Linux version so I can bot 24/7 on my raspberry Pi :).

I wish I could, but Simba no longer supports Linux... it used too.

paggle - October 6, 2013, 10:08 am

Uhm and I get this:

Not logged in

Successfully executed.

The following bitmaps were not freed: [0, 1, 2, 3, 4, 5, 6, 7, 8, 9]

Do you know why? I didn't read the whole thread :s so I'm sorry if the answer is already given in this thread.

Dark_Sniper - October 6, 2013, 10:36 am

The script will try to automatically open up your web browser to neobux.

if it does not succeed you will need to have neobux opened up when you hit run.... Make sure you minimize simba and have nothing but neobux up.

Also make sure you are logged in before starting the script.

paggle - October 6, 2013, 11:02 am

Uhm, I've 2 Monitors ^^ and the neobux tab opens... but not as a new Browser session.. just as a tab, so its next to my other tabs which are on my secondary Monitor ^^.

// and it's not working even if I place the tab on my primary monitor and hit run at samba.

Layla - October 6, 2013, 11:13 am

If I use simba in wine on my ubuntu computer would it work?

xmidnightxlone - October 6, 2013, 11:15 am

(Oct 6, 2013 10:36 AM)Dark_Sniper Wrote: [\[CITE\]](#) The script will try to automatically open up your web browser to neobux.

I ran it and it completed all of the adds, the only thing it didnt fully complete was adPrize. it took me to the page but didnt click on anything. Works amazing though, thanks OP!

Ryntar - October 6, 2013, 11:19 am

I get

Not logged in

Successfully executed.

The following bitmaps were not freed: [0, 1, 2, 3, 4, 5, 6, 7, 8, 9]

I get that error now too, atleast it's past the old error.

Dark_Sniper - October 6, 2013, 11:42 am

(Oct 6, 2013 11:30 AM).Deadmau5 Wrote: [\[CITE\]](#) I get that error now too, atleast it's past the old error.

Ok guys try this :

Find the green cross hairs

Next left click and drag (meaning hold your click) to your desktop.

This should bring a read box covering your entire screen.

Next run the script and make sure neobux opens up in the red boxed zone.

Hope it fixes it.

Layla - October 6, 2013, 11:46 am

Does neobux pop up?
Try having neobux preloaded and then try running the script.

Next thing... Are you logged in lol.

Just trying to cover all the bases.

Layla - October 6, 2013, 11:49 am

(Oct 6, 2013 11:47 AM)Dark_Sniper Wrote: [\[CITE\]](#) Does neobux pop up?

Yeah, i'm already logged in to neobux.

Dark_Sniper - October 6, 2013, 11:51 am

I'm looking into this problem.
Most likely the tolerance for finding the bitmap of the logout button.
That or they changed it.

Ill see what I can do!

paggle - October 6, 2013, 11:55 am

(Oct 6, 2013 11:49 AM).Deadmau5 Wrote: [\[CITE\]](#) Yeah, i'm already logged in to neobux.
Yep I'm logged in, too and the method with the crosshair doesn't work for me, too.

Dark_Sniper - October 6, 2013, 12:04 pm

I ran into the same problem and the way I fixed it was to have Neobux.simba saved to my desktop and then to close out simba entirely and then to double click the neobux.simba file. then hit run and tell me what happens.

So:

1. save Neobux.simba to desktop.
2. Close out of simba.
3. Open up neobux.simba
4. hit run and cross your fingers.

Layla - October 6, 2013, 12:09 pm

(Oct 6, 2013 12:18 PM).Deadmau5 Wrote: [\[CITE\]](#) Didn't work still getting the same error.

Here's what I did:

1. Open google chrome; didnt work for me on safari
2. open new tab but dont open neobux
3. Make sure you have nothing but the new tab open
4. Open Simba and make sure its up-to-date
5. after that run the "Neobux1.1" file.

I followed these steps and it worked.

Also, dont move your mouse around until it starts the process on its own otherwise(I found) It wont work right.

Dark_Sniper - October 6, 2013, 12:33 pm

(Oct 6, 2013 12:28 PM)xmidnightxlonerx Wrote: [\[CITE\]](#) Here's what I did:

I followed these steps and it worked.

Yes this is tested to work in google chrome.

I also did a few tweaks... new version is up in first post.

You can also try that, I don't see how it will help too much.

Make sure the logout button is visible to the script

(Made a secondary account a a different computer to do more testing.)

Ryntar - October 6, 2013, 12:41 pm

New version works fine, thanks bro.
