Thread: [So, my server is Ddos protected, can someone test?](#)

somma0229 - October 3, 2013, 3:53 pm

Hello guys

my server is ddos protected up to 2gbps or 1,000,000 pps

can someone try to take it down ? with booters?

Ip: 199.192.75.48

Paulmad - October 3, 2013, 4:04 pm

2gbps isn't much protection now a day's.

somma0229 - October 3, 2013, 4:10 pm

well you can't get it down

bigger attacks will be nullrouted

NekoYourGod - October 3, 2013, 5:28 pm

Pm me if u want. I can with 30 Gb/s.

Lil W?yne - October 3, 2013, 5:29 pm

that is your minecraft server ip or what?

Canc?r - October 4, 2013, 2:37 pm

I've dealt with Staminus before. One pro of their service is dynamic VLAN ACL entry system, a couples cons are they will null you instantly if you get an attack higher than your SecurePort subscription and they don't hold well against intricate TCP floods. ?

Almost Einstein - October 4, 2013, 2:43 pm

Most of API servers hit 100mbit / 1gbps, so you're in safe zone from booters i think. You can PM me if you want me to try your server with good booter. (Just to make sure it's safe against booters) I could use bots, but i think it could go down with those too easily.

Mzarr - October 4, 2013, 9:33 pm

I bought a stresser called xboot and i could probably take that down with it. They hit harder then 2Gb/s.

B?wseR - October 4, 2013, 10:06 pm

mzarr its ddos protected so that means they are going to be filtering on every port most likely and have some type of mitigation

backdoorhk - October 5, 2013, 3:03 pm

your server go down with ~ 100 mb/s udp, PM me for proof. (team viewer), using my botnet

MiniTsu - October 5, 2013, 11:55 pm

Should i put 15 dedicated bots on it ? :p
