Thread: [Hide Processes From TaskManager](#)

Cunt - April 21, 2010, 11:11 am

found this thought it was useful thought i would post and share :)

This is quite a handy source
all credits to : Scout
result

[img]http://i47.[censored].com/2ez7lab.jpg[/img]

how?

first download - <http://www.mediafire.com/?cnym0oiwcvq>

To use it: TMListViewDelete.Running = True. To Disable, set it to false.

Troxin - April 21, 2010, 11:12 am

If it works I will love you.

I didn't know how to do this :X

Cunt - April 21, 2010, 11:15 am

lawl this has been public for like ages i thought it was posted everywhere lawl well yes it works i think on all OS's not 100% Sure works for win7 32 bit for sure :)

Troxin - April 21, 2010, 11:17 am

Sorry, I don't do much looking around.

Thanks though :D

Cunt - April 21, 2010, 11:18 am

No need to say sorry and does this work for you?

StRaXxD - April 21, 2010, 12:35 pm

It's work for me perfect...I just dont know the way how to thank you ;)

Troxin - April 21, 2010, 12:37 pm

I downloaded and looked at it but I didn't use.

Voluxe - April 21, 2010, 1:25 pm

Awesome. I might use this later :D

Cunt - April 21, 2010, 1:25 pm

You should this is very good and no need for timers !!!

Bitwin - April 21, 2010, 1:34 pm

This is AWESOME, may become useful sooner or later

Cunt - April 21, 2010, 1:35 pm

Yeah :) Thanks :D looks pretty good been public long time aint seen so i thought i wud share again :D

PAGMAN - April 21, 2010, 1:39 pm

Can it hide a single process only?

Cunt - April 21, 2010, 1:41 pm

No this is all there was a post earlier around about hiding 1 process but i do not believe it worked on all Os's

Soul Collector - April 21, 2010, 1:41 pm

Cool, going to download and post results. Thanks m8 :3

Macca - April 21, 2010, 1:42 pm

very nice man thanks !!!!

Cunt - April 21, 2010, 1:42 pm

No problem :) <3

2 short

Soul Collector - April 21, 2010, 1:46 pm

Works good.

PAGMAN - April 21, 2010, 2:06 pm

(Apr 21, 2010 01:41 PM)FaNaTiC Wrote: [\[CITE\]](#) No this is all there was a post earlier around about hiding 1 process but i do not believe it worked on all Os's

Thanks. Saw that post AFTER I posted this. lol... oops

Cunt - April 21, 2010, 2:15 pm

lol yh ima try to work on 1 that just blocks 1 process dun o wether to try modding the 1 atm to work with win7/vista nate said its been done so ill give it ago :)

MCxCodex - April 22, 2010, 9:08 am

I tested it on XP SP3 and it works perfectly! Thanks

Cunt - April 22, 2010, 9:20 am

No prob i know this works on all OS's very handy feature in KL and maybe as fun in rats :)

Gino90 - April 22, 2010, 11:44 am

Nice share, I'll give it a try

thanks for sharing ^_^

McMini - April 22, 2010, 12:02 pm

Very very nice share, thanks mate!!

Cunt - April 22, 2010, 12:06 pm

:) No prob mate :) i got a few more good codes might post em later :D

McMini - April 22, 2010, 12:09 pm

Heh, cool.

But it will only work if the windows language is on English.

Else it can't, obviously, find a window named "Windows Task Manager".

Cunt - April 22, 2010, 12:28 pm

Not 100% sure Mirharbi said something about

Code Process.getprocessByname("taskmgr").mainwindowso yeah try getting it by the process name :)

julian - April 22, 2010, 8:04 pm

Aha, this is a bit of a blitzkrieg approach - nuke the lot. That makes it a bit obvious something dodgy is going on doesn't it?

The apis are all wrong (I think this should be my catchphrase). There's a mad mix of Longs, Integers and IntPtrs for HANDLE types, and yet it's got StringBuilders in the right places.

[Eprouvez] - April 22, 2010, 8:53 pm

This was posted like 2 months ago on LC Lol. I would've posted it here, but I only post codes I write or modify.

Cunt - April 22, 2010, 10:51 pm

Yer i posted it because people where tryna get the other 1 to work so to save time i put this here. :)

[Eprouvez] - April 22, 2010, 11:22 pm

Haha the other way does work, but it's messy code, I'm fixing it up haha.

Pittsburgh_Steelers - April 22, 2010, 11:26 pm

is there anyway to reverse this effect?

HitTehBlunt - June 23, 2010, 10:42 pm

This is pissing me off can someone post how to get this to run i've tried everything -.-

Cunt - June 23, 2010, 11:15 pm

1, Old Thread.

2, Why beg every one else can get it working its really easy make a module paste code, and do the rest it explains it all...

adware - June 23, 2010, 11:30 pm

Nice,thanks for the share Spaz :)

Vigor - July 19, 2010, 4:10 pm

Bump, thanks for the credits, I'm Scout (on LC), the writer of this.

There's a much newer version on my Blog, deletes only your app from the applications list, and it works on all Windows OS's I'm pretty sure. Just wanted to let people know.

If it doesn't work, all you have to do is change the text displaying how to get the taskmanager's ID.

Braco Asshole - July 19, 2010, 4:23 pm

Thanks for this wonderful share SpazMan.

CometJack - July 19, 2010, 4:47 pm

Please post the source on Pastebin so I can look at it, I use C# not VB and I can't open it up.

Vigor - July 19, 2010, 4:52 pm

(Jul 19, 2010 04:47 PM)CometJack Wrote: [\[CITE\]](#) Please post the source on Pastebin so I can look at it, I use C# not VB and I can't open it up.

Open it up in NotePad. It's just plain code.

gknight - August 30, 2011, 4:39 pm

Thyonic, what is your blog? I know I am resurrecting an old post, but I am looking for something, anything that will work on any OS. I have tried everything that I have found and can't seem to get anything to remove my app name from the TM process tab. I am interested in trying your updated version. Thanks in advance.

KingCobraXD - August 30, 2011, 6:13 pm

Lol. I kinda knew about this a long time ago. However, I didn't post it up but the creator did post it here himself.

willbebacksoon - August 31, 2011, 2:05 am

Advanced one here:-[Source]Vb.Net {Unkillable Process in taskmgr+Hidden in Taskmanager } Vb.Net[Source]

<https://hackforums.net/showthread.php?tid=1273187>

AlienBytes - August 31, 2011, 2:27 am

This is awesome! , although it's just a bit old isn't it ?

BADG3R x - August 31, 2011, 3:27 am

Very good tutorial seems to work :D Any ideas how to hide from process explorer ?

SIM-478284 - August 31, 2011, 3:34 am

(Aug 31, 2011 02:05 AM)((JUSTICE)) Wrote: [\[CITE\]](#) Advanced one here:-[Source]Vb.Net {Unkillable Process in taskmgr+Hidden in Taskmanager } Vb.Net[Source]

<https://hackforums.net/showthread.php?tid=1273187>

I hope this doesn't sound harsh, but honestly your code failed to do both things in my computer. It couldn't hide or protect the process either. Just saying, do not take this as an insult.

(Aug 31, 2011 03:27 AM)BADG3R x Wrote: [\[CITE\]](#) Very good tutorial seems to work :D Any ideas how to hide from process explorer ?

You just have to do the same to explorer you do to taskmanager.

BlackStone - August 31, 2011, 3:44 am

go here to see hide process from task manager , it hide only one process that you want
