Thread: [Skype Protect - Protect your ip!](#)

Omarr - October 5, 2013, 11:30 pm

SkypeProtect is a free application that can hide your IP while you're using Skype. This can help prevent DDOS attacks, and helps you to remain anonymous while using Skype. All you have to do is select a proxy from the proxy list, click Protect and the application will do the rest for you. The live proxy list is always verified. You can also use a custom proxy if you want. You can download the application by clicking on the download button below or you can click [here](#) for the source code.

Requirements:

.NET Framework v2.0

Virus Total Scan:

xXPsychophilXx - October 5, 2013, 11:48 pm

Looks sexy but please post a virus scan and I would definitely download!

2344lkn - October 5, 2013, 11:57 pm

There are "working tuts" on how to edit your skype config so your ip cannot be obtained by resolvers. There is no need for this?

Don't take this the wrong way it's a unique idea, I haven't seen one yet so if you made this thats cool and keep making stuff!

Dr41DeY - October 6, 2013, 1:20 am

I would say not a bad tool.

Thanks for this! :^)

Winry Rockbell - October 6, 2013, 1:22 am

Or just change your proxy in skype settings..LOL
