Thread: [Complexity 3D logo / design](#)

.Element - October 6, 2013, 8:22 am

The other day I was just messing around and didn't have anything to do so I thought why not model and make scenes for logos of groups on HF.

Here's the first one I did using Complexity's logo. I used my ivy style I'm really fond of but this is by far my favorite piece.

Image [\(Click to View\)](#)

(I'm not apart of Complexity and if this needs to be taken down let me know. :s)

This looks really great mate ?

Really great ?

Really great ?Thanks! ? Now that I'm thinking about it I probably should've cutout the circles on the small gear instead of having them come out but oh well.

Werto - October 6, 2013, 9:30 am

Holy shit!

You're talented man, this is looking really good.

You're talented man, this is looking really good.Really appreciate it. Took me around 4 hours but it was worth it ?

lenaos - October 6, 2013, 9:39 am

Cinema 4D I am guessing.

?

PhehnoM - October 6, 2013, 9:39 am

Looks really nice, did you used volumetric light?

Yes, I use c4d a lot actually.

Check the Black Diamond piece and all the animations/intros on my channel

btw, it might had looked a bit better with a volumetric light, it generates like a fog/smoke ambient, but it still looks really nice!
