Thread: [Xerneas DoX TuT](#)

/Jigsaw/ - October 9, 2013, 5:27 pm

To Start: This is my first TuT for the HF.

Okay since I got that off my chest, I know there are a lot of Doxing TuTs here, most of them are really good, haha. Okay but some I don't get and there's one method I like, but have to edit a little bit. Props to all the people who made them Tuts. I would give you the props (With name, but I don't know your names, so sorry)

Also before I start you should have a template, I like mine being;

Name:
Username(s):
Age:
Parents:
Address:
Phone:
Ip:
Extra(s):

[/color]Method #1 (Most Common, and Easiest Way To Dox)

Searching The Web:

Searching the web is the most common and easiest way to Dox someone, just searching sites like:

www.spokeo.com
www.pipl.com
www.whitepages.com
www.facebook.com
www.twitter.com

They're the ones I use. Okay, another great tip. Use a IP Tracker. This will give you a general idea of where they live and if they have a VPN or proxy setup.

Okay, so you got the websites, you've tracked their IP got their state and city. Now what? Well I hope you got their name. It's not that hard most people when using usernames sign up using their real name, quick search around you can find it.

Okay so this is what we got:

Name: Sarah Example
Username(s): sarah.example
Ip: 143.56.69.69

Now all we need is:

Age:

Parents:
Address:
Phone:

Again, Spokeo, pipi, whitepages, twitter, and FACEBOOK. Mostly everyone has a facebook account, and mostly 3/4ths of them will have one relative on there. Bingo got their parents name. This will make it a lot easier when finding there phone number and address.
(Note: Getting there email account(s) will help now and in the future)

So now you have pretty much everything you need for doxing them. Good luck with method #1.
Moving on to #2

Method #2 Social Engineering

(Note: Not going to in depth with this method as it has hardly ever worked for me)

Like I said I don't like it so I will only do a quick and easy method :P

So if you have there email or phone number you can call them acting like someone you're not, 'Reporter, Job Manager' Whatever the case maybe.

So when you're talking to them you must be very calm (This being on the phone), so you start with

You: Hi, I'm Matt Rice From Wherever and we have a couple of questions for you. Is that fine?

Victim: Sure. What are they?

You: Okay, so first and last name?

Victim: Jane Yolo

You: And street address of what city?

Victim: Sweg USA

You: Okay thank you for your time.
Method never works for me, but I guess theres always a chance

Last Method I will be explaining, thus being quick. Method #3

Method #3

I have no idea what this is called, but I like it. I have tested it on myself and other people and this has worked. This is basically a edit of someone else's TuT with this method. Props to you for finding out about this, I don't know your name, but I must edit it.

Okay so the way I read about this you call there ISP saying that you need to pull information about them for reasons I can't go in depth with it because I didn't understand and I editted it like I said and made it easier on me.

So call there ISP. Ring

You: Hello, I'm Matt Rice From The Head Security Department, and we've been getting some red

flags on a certain IP address with illegal activities. May I speak with your manager?

Them: Sure, Please hold.

Manager: Hello, how are you?

You: Good (Re-explain yourself), then say that you are having maintenance on your security systems and that you need them to bring up their info. (Info you would like, best is; Registered Names under IP, Phone, and address.)

With that also say you will need the info in case you need to file a police report on them.

Manager: Okay, just let me get it for you here... And then you go.

These are my DoXing methods, I hope you enjoyed reading my tut. and maybe it helped you :). Also again I can't stress it enough to the other people that made the dox through IPs, it helped me think of the security idea. :P Thanks.

EDIT: If they're any mistakes please let me know.

Frivolity - October 9, 2013, 5:35 pm

very good tutorial, You had a few spelling mistakes tho.

Lightsout - October 9, 2013, 5:59 pm

Say if I have, Name, Mom's name, Dad's name, City, Facebook, Email & IP.

How would I get my victims full approx Address?

/Jigsaw/ - October 9, 2013, 6:13 pm

(Oct 9, 2013 05:59 PM) Adapter. Wrote: [\[CITE\]](#) Say if I have, Name, Mom's name, Dad's name, City, Facebook, Email & IP.

How would I get my victims full approx Address? If you have their full name, you can search them on any of the sites given and put their city in with it. Then names will pop up, one of them will be the person you are looking for.

Another really good tool is google image search for when you have a profile pic. You can uncover some other info from that.

I think it's extremely unlikely the the ISP would give you any information. It's illegal for them to give it out, they won't even do it for the movie companies when they catch you pirating something. I'm not saying it's impossible, but very hard.

?NONYMOUs - October 10, 2013, 4:08 am

not to bad thanks for the tut!

will try later

--Alexander-- - October 10, 2013, 4:43 am

nice TUT keep it up bro

.,.,.,.,.,./.,.,.,.,.

If you do it right, you can get info from ISP's. I have done it, and so have some friends, but yes it's probably the hardest one to do D:. But worth a shot right?

Erm, he did say if there was any mistakes, we should tell him.

So I did.
