Thread: [problme with darkcomet](#)

Le_Testeur - October 14, 2013, 1:06 pm

Hi, i have problem with dark comet, i cant infect me, or my second computer !

Port : 3081 Open and checked on canyouseeme
firewall : disabled
No-ip : update and works
password on darkcomet : none
avira: disabled

Use install, keyloggers

open -> none

who can help me ? thank.

Make sure your default gateway is open on your port.

Le_Testeur - October 14, 2013, 1:46 pm

Yes it its, but thank for you reply

Create a server, and for the network settings IP, put 127.0.0.1 and infect yourself. See if that works. (You might want to turn of the shield and startup for this one.)

Le_Testeur - October 14, 2013, 2:07 pm

its works with 127.0.0.1

problem is from my no-ip?

rip - October 14, 2013, 2:08 pm

Check your ipv4, I seemed to get a problem with that.

Le_Testeur - October 14, 2013, 2:12 pm

how can i check it ? do you have a thread ?

its not my cup of tea, thank.
