Thread: [\[TuT\] How to setup and use iStealer 6 \[GraphicBooting Tut\]](#)

Recoveries - April 22, 2010, 2:25 pm

Disclaimer: This tutorial is to be used for educational purposes only. If you use it for anything other than that its on you.

In this tutorial I will show you how to setup and use iStealer 6 .
iStealer is a stealer (Obviously) This stealer will take somebody's user name passwords and send them to a website that you login into with your own custom user name and password.

Requirements:

iStealer: Download it [here](#)

Password: Code <http://graphicbooting.com/Step 1: Your going to need to register at cwahi . to do that go here> Make sure you use a real email adress.

Step 2: Sign in and click on "[Databases](#)" , Then click on "Set Up My Database" .

[IMG]<http://img716.imageshack.us/img716/8522/30921389.jpg>[/IMG]

Step 3: Click on "[File Manager](#)" , Then click upload, And navigate to your iStealer folder and double click on the php logger and upload both files.

Step 4: Go back to the file manager and "edit" on the index.php.

[IMG]<http://img181.imageshack.us/img181/8386/26462178.jpg>[/IMG]

Step 5: Go to the [database](#) in a new tab and leave it there.

Step 6: Copy and paste the required info into the index.php, Use the colors to help you. Whatever is underlined in red you can make what ever you like but your gonna have to remember it.

[IMG]<http://img42.imageshack.us/img42/3946/99554832.jpg>[/IMG]

[IMG]<http://img442.imageshack.us/img442/8431/35230593.jpg>[/IMG]

Step 7: Save it, Click "My Site" and make sure you can log in. Use the user name and password you put for Code `$username = "User name here"; // Login Username`
`$password = "Password here"; // Login Password` If you can login continue on to step 8, If not re read the tutorial and try again.

Step 8: Open up iStealer and copy and paste the login page to your stealer where it says " Url: " Then click "test URL" and make sure it says " Works perfect! "

[IMG]<http://img265.imageshack.us/img265/8807/27381930.jpg>[/IMG]

Step 9: Click build and find a place to save it and thats it! you've now set up your stealer .
If you have any problems or need help post here and I will help you.

hailz - August 4, 2010, 6:35 pm

Does this still work? I don't wanna download it if it doesn't;waste of time. Anyone know?

Controlled - August 8, 2010, 10:58 pm

love this tut VOUCHE for guy, his tuts are legit. only recomendation is that you change the name to something phishing, cus thats what this really is isnt it? pretty much.

Optyx - August 9, 2010, 1:25 pm

cwahi.net will now delete your account for uploading the iStealer files

Degree - August 12, 2010, 9:10 am

Thx. Nice tutorial. :) :D

WTFMUCH - August 17, 2010, 11:12 am

says i cant save this file, any advice?

EDIT: woops hahahaha my account got terminated...maybe it was because they detected the files?
no clue.

EDIT:EDIT: Piracy, hacking, cracking, phishing, phreaking, terrorism, warez, pyrotechnics,
exploitive software. This includes text or other media that educates or encourages this activity.

Deliberately changing the extension of a file to hide its contents will not only not work, it will be
considered an illegal file and will result in the immediate termination of your account.

Thanks Bro

This Helped Me Alot

haggan - February 2, 2011, 5:13 pm

I'll send you a PM in a day soon unless i get an answer to this :>

First of all...

BEST TuT of 'em all, tried 4 diffrent tutorials, this one... easily best!

However, i have a small issue, when i start the iStealer program, i'm unable to press any of the buttons inside the utility, can't press "build", can't press "options", can't do shit!

The only thing i can do is paste my link to my .php login but nothing more...

Some weird shit or what?

Tried diffrent compatibilites but don't think that's the problem, gonna try tomorrow on my Win7 laptop instead and see if same thing is happening...

Got solution? Please PM or respond

i.Kawasaki - February 2, 2011, 6:56 pm

They auto terminate your account within minutes..

woo3cabj - February 3, 2011, 5:04 am

Not work! When you do this your account will be blocked!?

(Feb 3, 2011 06:04 AM)woo3cabj Wrote: [\[CITE\]](#) Not work! When you do this your account will be blocked!?

That's why you need offshore host.

Btw one question it works with steam accounts aswell?

haggan - February 12, 2011, 9:36 pm

I'm unable to do any changes inside "iStealer 6.exe" , if i press "about" nothing happens, if i press "test url" nothing happens and so on with all other stuff...

Is it something wrong with my version or does that just mean i have incorrect settings within the .php?

War God - February 12, 2011, 9:51 pm
