Thread: [\[TUT\] Free, unlimited ddos shells/free VPS's \[TUT\]](#)

ESSYN - October 17, 2013, 11:41 am

Hello, now im releasing a method, how to upload ddos shells on VPS's for free (unlimited). These shells are kinda weak tho, because of shared hosting.

I have no idea how long it takes that they suspend your account (if they will)

You can also just take a VPS, but its kinda useless since u cant get full root access

You will need:

-Finland IP/VPN (idk if some other countries work, but sweden does not work atleast)

-FileZilla

-A shell source (ofc)

Allright, lets start. First go to [AlwaysData](#) then click Plans, then take any plan you want from the shared hosting.

Now, you can use your real or fake email (they dont verify your email, so i prefer using fake) then just fill in the info, and create your VPS.

Creating the shell

Now, enter the admin panel, and scroll down untill you see "FTP" on the left side, click it, and change the password.

Now open up filezilla, and use the following credentials

Host: <http://ftp.alwaysdata.com>

Port: 21

Then just click on the "www" directory, and upload your shell there Grin

the shell location is "your account name".alwaysdata.net/"shellname".php

Please say thanks if it helped since i released this right after i found it, and created this tutorial. Feel free to PM me if you need more help with this method.

For register in alwaysdata i need credit card...

oBuRneR - October 17, 2013, 1:35 pm

A credit Card is needed. No Bueno..

poepen112 - October 17, 2013, 4:13 pm

Registered without cc but shell doesn't work:

(Didn't use a VPN either, i live in the netherlands.)
