Thread: [Use sendkeys.send to send string ONCE?](#)

xXPsychophilXx - October 19, 2013, 6:47 pm

Is there a way to use sendkeys.send to send the string once? instead of like spamming it?

Obviously don't put it in a loop. How copy pasty can someone be?

But I have a button click event and the code is sendkeys.send(textbox1.text) this just keeps putting the text from textbox1.text over and over and over WITHOUT A LOOP

Post your code then instead of expecting us to be psychic

Ok here is my code

```
Code Private Sub Button1_Click(ByVal SendWaiter As System.Object, ByVal e As  
System.EventArgs) Handles Button1.Click  
    SendKeys.Send(Textbox1.text)  
End Sub
```

System.EventArgs) Handles Button1.Click  
    SendKeys.Send(Textbox1.text)  
End Sub
```

is this the only code that calls the button click event? must be some other code calling this event. that code should execute once per button click.

nathan72389 - October 19, 2013, 11:14 pm

OP is stupid, quit clicking the button 300 times. Stupid!

Lambasoft - October 20, 2013, 4:04 am

Haha, I may know what's happening.

Somehow the textbox1.txt has an Enter (return) in it. It's rerunning itself since the focused object is the button.

Very good idea, nice one. I came to this thread thinking he didn't want to send duplicate messages from a list or some sort

I know OP is using .NET but i can also replicate his problem in VB6 too and it was the return carriage inside a textbox on the last line that causes it to spam. picture below is what happens when i put an empty line on the bottom

Woah, your stars are green! (Edit: everyone's are, just noticed that lol)
Good find though. I would have never tested it haha
