Thread: [Non-alphanumeric PDO-based Database Backdoor](#)

Keeper - October 20, 2013, 5:16 am

It's been a while since I last wrote something. This backdoor in particular was written during my summer vacation. It is an improved version of [my previous one](#). This current one disposes with the following extra features:

- Database browser and modification menus
- Semi-non-alphanumeric server-side source
- PDO source with adjustments for IDS/WAF bypasses
- Additional obfuscation within the declaration of variables/arrays/functions using Kanji symbols, Hepburn romanization system and particularly alt-symbols.
- MySQL queries' obfuscation and one-line source
- Hexdecimal/alphanumeric password generator
- Arbitrary file uploading to a certain directory
- Server information for the basic configuration settings of the server
- Arbitrary command execution
- Directory traversal menu for browsing directory contents

For the most of the code, there are several scripts and jQuery plugins for the smooth listing of the databases and the database menu. The requests are not asynchronous though - I didn't feel like meddling AJAX as well so.. The password generator is complete Javascript and the alphanumerical values are just extended strings so make sure you freeze the generator once you get a password because it's gonna overload your browser after running on for a while. I think the rest is all self-explanatory.

How to get it?

Link: <https://mega.co.nz/#!UBIVTCSS>

Key: fOGKLRWOfs-ZdfErI5KplmsCM6cMXdf_s_WoQv_OWxE

Note: Before you upload it make sure you edit the PDO constants with the appropriate credentials. The default one is: 'root' without a password.

Looking really good Keeper. It's beautiful.

cheatson - October 20, 2013, 5:26 am

Nice and stylish, keeper-esque one might say. Thanks for the share

That is the best reply I've been given through all my years of experience.

Looks great, Keeper.

Going to do download it in a few minutes.

Vinnie - October 20, 2013, 9:18 am

YES, brothers! ?

I will recommend this to my university!!!! ?

Have you had time to use this tool yet?

I need to know before I publish this I ink to my university.

Zixem - October 21, 2013, 8:20 am

dat backdoor

looking good Keeper :3
