Thread: [Using Rinlogger](#)

TheHawk33 - October 20, 2013, 9:52 am

1:GOOGLE:"Rinlogger" and download!

2. After downloading, open Rinlogger and click "create new"

3.Now enter the following information.

Email- Your email address

Account Password-Your email password

Keylogger Recipients- Enter your email adress

4.Now enter the duration(time in minutes) to receive email Key Logs (recommended 5 minutes) after that hit "verify now". If you get a message saying verified, your good to go.

5. Now change Install keylogger to "enabled". Name the file anything you want and select Installation path as "startup" Finally click next.

6.Now change enable downloader to "enabled" and check once only (requires install). Finally click next 3 times.

7.now change enable file binder to "enabled" and select any application or file doc. to bind by clicking file binder setup. Then click next and change steal password to "enable" , finally click next two times

8.Hit on "?" button besides every textbox to generate random produc information and finally click next.

9.Now, hit on "SAVEAS" and select the path where you want to save your keylogger server file. Click on "COMPILE" .

Now just FUD it, bind it if you want and send it to some FOOLS!

This Thread is complete bullshit, atleast you should have provided us a DownloadLink.

TheHawk33 - October 20, 2013, 9:57 am

I did want people to think I infected it dumbass. And was to LAZY!

bockwurst82 - November 4, 2013, 1:20 pm

I have rinlogger and followed this tutorial

[link](#)

[http://www.you](http://www.youtube.com/watch?v=b9VtYHvDxbw) tube.com/watch?v=b9VtYHvDxbw

, but when I try to click "once only" the mark won't stay. Also, after hitting "compile" it shows 8 bugs while compiling and there is no file compiled. help please...
