Thread: [Is it possible to make light around your head so that the security camera cant see you](#)

TheHawk33 - October 20, 2013, 10:45 am

I am wondering if theres a way of building a hat that had led lights around it and you cant see the light in person but you the security people can't see you.

Rasbora - October 20, 2013, 10:46 am

I think infared lights or something like that may work, Not sure.

Pillows - October 20, 2013, 10:47 am

But if you had bulbs around your head it would still make it suspicious.

CryptoExchanger - October 20, 2013, 10:47 am

Interesting idea, it would have to be pointing at the camera, so the lights would have to be able to detect cameras.

Lelouch Vi Britannia - October 20, 2013, 10:48 am

Tape a few of these on the hat.

CryptoExchanger - October 20, 2013, 10:51 am

If you wrote a script so that the lights aimed at any detected camera it could work, use like a Raspberri pi as its main hub. You would have a computer hat lol.

Lelouch Vi Britannia - October 20, 2013, 10:52 am

I need to buy some stuff :)

TheHawk33 - October 20, 2013, 11:30 am

I saw it on white collar, mozzie built a hat with rims with lights on it and you not see the face it looked like a white light.

Hahah a computer hat...

THE HAWK LEFT THE nest

iElement - October 20, 2013, 11:33 am

You don't have to use visible light to do this. Video cameras will pick up Infrared light as well.

DaRkReD - October 20, 2013, 5:22 pm

Infrared lights as everyone suggested will work well except more and more cameras are getting IR filters over them.

Your best bet is a powerful light source to burn out the CCD

EmperorDAZ - October 21, 2013, 1:57 am

If you want to destroy a CCD, point a somewhat powerful IR laser to it. (Grab a DPSS Green laser, mod it (remove the Nd:YVO4 and the IR FILTER))

Bachelor - October 21, 2013, 3:01 pm

you can just fuck up the camera. OR

sneak in at night and run some IR lights with some high intensity it should work.
Don't risk your life on it thou.

Superman - October 21, 2013, 3:06 pm

Just buy a \$700 mask and do what you please. Just don't use your own car as the getaway vehicle.

Bachelor - October 21, 2013, 3:13 pm

Worth every penny.

<http://www.spfxmasks.com/>

If i was you ill go with a old man or the black senior mask.

pstopman - October 26, 2013, 8:16 pm

interesting idea.

I can only imagine what the ppl viewing the security camera be thinkin

lizards - October 26, 2013, 8:58 pm

Just get a few bright IR LEDs and wire them to a couple of watch batteries, you can hide them in a hat or something, and you can test the coverage by using any camera.

Hallucinogenics - October 27, 2013, 4:09 am

If your cameras are Inferred then no... this will not work. But if you're going to wear a "HAT" anyway that may or may not be captured on camera.

Depending on how fast you can run why don't you just use a balaclava?

(I may of got what you're asking wrong if so then I apologize.

gr33npixel - October 31, 2013, 8:50 pm

Instead of walking around with a fricken chandelier on your head that will restrict motion, make you look like an idiot, and make you more easy to find. Why don't you just do things the old fashion way?

XPredatorX - October 31, 2013, 11:47 pm

Yeah get a baseball hat and hot glue some ir leds to it.

fatmonkey - November 6, 2013, 9:17 am

People have made hoodies/hooded sweat tops with IR LED's in a chain around the edge of the hood. Hooked up to a battery pack in the front pocket. This creates a ring of light around your face invisible to everyone, but visible to most security cameras, especially at night time. I have seen videos of people using them.

Most modern security cameras film in IR or using IR filters even during the day now.

evilonedvs - December 12, 2013, 1:27 am

This is definitely possible. . Have not done it myself but have seen it done.. there is a awesome show that aired on discovery channel it will tell you how to do this as well as how to disappear and stay off the grid. The show was called "Track Me If You Can" check it iut and let me know the outcome.. GOOD LUCK!!!

xoxitoo - December 12, 2013, 4:28 am

i think its possible but to make a one that is not attracting to much attention like something hidden beneath a hat or stuff like that than it would be more efficient !
