Thread: [Need help where to start making Gallery Blog website](#)

Dmitriy - October 21, 2013, 2:12 pm

Hello, I am in process of making IP Gallery website and I am not sure where to start. I have had experiences making a forum website, for that I have used IPB Invision Power Board, I have had experiences making and running wordpress websites. My question is what tool should I use for image gallery building? Joomla, wordpress IP Gallery? or any other services? I want not just gallery but also a blog with it together.

I am making a website for my friend who I work with. He owns a painting business, he is decorative painter and we need to make a website for business based on image galleries with different categories. Not just image website and I am really confused right now what should I use, what are different tools to use. Would really appreciate if someone would give me some hints and maybe with some recommended plugins.

Thanks!

I want to make something similar to this website: <http://www.rentapaintersa.com>

I suggest you use Wordpress for this, because I'm guessing you don't have much coding experience.

Setup Wordpress then look around for awhile until you find the right theme that you think will work best.

Good luck.

And after you install Wordpress, get the following plugins to protect you site: WP SEO, Wangguard, Akismet (that's always included), W3TC, Backwpup, Contact Form 7,...

This helps with security and functionality.
