Thread: [Network User Whois](#)

Biohazard™ - April 23, 2010, 8:19 pm

I made a cool batch file for use on large networks (E.g. your School) that use domain controllers. This typically won't work on your home standard home network. But if you are on a domain controller you can use this tool to see info on a name you type in. You can also display all users registered on the network. it is good for seeing basic info and memberships of people and also find unsecured accounts (Require no pass) :)

This batch requires no special privileges for any features :) coded for Vista and above.

Code @echo off

title Domain Name Whois DOS V1.2

color 0A

echo Welcome to Domain Name Whois by Biohazard™ v1.2 Welcome to the main menu.

pause

:menu

echo _ _

echo _.:Main Menu:._

echo -----

echo 1. Search User 2. List All Network Users 3. Exit

echo -----

set MENUCHOICE=

set /P MENUCHOICE=Please Select a Menu Option: %=%

if "%MENUCHOICE%"=="1" goto searchname

if "%MENUCHOICE%"=="2" goto allusers

if "%MENUCHOICE%"=="3" goto exit

if "%MENUCHOICE%"=="4" goto error

if "%MENUCHOICE%"==" " goto error

:searchname

ECHO -----

set INPUTNAME=

set /P INPUTNAME=Please Enter a name you would like to search: %=%

if "%INPUTNAME%"==" " echo Please Enter a Name

net user %INPUTNAME% /domain

ECHO -----

pause

goto menu

:allusers

ECHO -----

net users /domain

ECHO -----

pause

goto menu

:error

ECHO -----
echo Please enter a valid menu number to continue.
ECHO -----
goto menu

:exit
ECHO -----
echo Deconfiguring Script, please stand by
timeout 2
exit
Coded completely by me, please don't leech.

Any Feedback? :) I want to know what you guys think.

amahanit - April 28, 2010, 12:01 am
really nice script to view a users information .

Moot - April 28, 2010, 12:02 am
it looks pretty good i'll try it tomorrow and leave some feedback :D

Xeke - April 28, 2010, 9:15 am
Looks good, it's a pity I won't be able to try it out D:

Biohazard™ - April 29, 2010, 2:25 pm
I have made this batch into a huge networking tool. Features the network this same whois tool with net tools like ping with data, telnet, trace route. It's good for people who are still new to command prompt. It's at school right now but I will post tomorrow. Also post suggestions if you have a feature you would like me to add.

shadow_69_91 - April 30, 2010, 5:07 am
This will be really handy to a lot of people man. I believe batch is a great little tool. and you just shared one of the best batch scripts ive found so far. thanks for the share bro.

Biohazard™ - May 1, 2010, 12:48 am
I have incorporated this script in to my new larger networking tool. This script is now located here
