Thread: [sandboxing ur rat only works with local host?](#)

**revv** - October 28, 2013, 4:44 pm

sandboxing ur rat only works with local host right?

you cant really test it to see if it would work on others or can you?

**Zapu** - October 28, 2013, 4:47 pm

No.. it works on both, just add your no-ip domain, then sandbox your server and if it works then you know it'll work on other people.

**revv** - October 28, 2013, 5:17 pm

thats weird cause it only works when I do it with my local host and when I try with my no-ip nothing happens and I have my ports open

Then you're probably not doing something right.

My guess is you're not port-fowarding right. What RAT are you using? Perhaps I can provide some TV support?

im using dc and my ports are open when I go to canyouseeme.org

ok well when I nat loopback it works
