Thread: [\[Link-Bomber\] Adf.ly, Adfocus, Link bucks, PPC Bot \(Download\)](#)

TazzyOpz - October 28, 2013, 9:39 pm

This was a pretty basic project. I've been using it for about 2 weeks now with no problems.

Right now it supports 3 different PPC sites: Adf.ly, Adfocus, and Link bucks.

If you use good up to date proxies and don't abuse the program. You should be safe from ban. But don't run it 24/7 with it viewing a page every 10 seconds and then ask yourself why you were banned.

Tried it but even though it says success it really doesn't show the views on my adfocus account.

Am I doing something wrong?

The adf.ly website doesn't count the proxy views ! They count 1 view for 100 proxy views ! But anyway nice program !

That's why you need to get good proxies. Elite/High Anon proxies. That way it doesn't pick it up as a Proxy view. I've had some hit and misses with it. But from what I read you should stay away from transparent proxies. ?

takes some time to update, just keep waiting :3

It's either picking them up as proxy views. Or you might have to try using one of the other proxy options? Or you haven't waited long enough for your account to update..

Doesn't work for me either. Haven't gotten 1click off of adfocus yet. I didn't want to try adfly not to get banned

n1K. - October 31, 2013, 8:38 am

200+ hits, and i got only 2 visitors and 6 views on adfly... anyway.. thanks for sharing that for free, nice job and keep it up.

Glitchyy - October 31, 2013, 5:15 pm

Thanks so much ive been waiting on this.

Fluffy24955 - November 1, 2013, 6:49 pm

For some weird reason the adfoc doesn't work, but adf.ly works well. It may be something with the options.
