Very nice review Phil, I enjoyed reading it. Thank you for reviewing our product.

Dialga - October 30, 2013, 3:11 pm

Nice review of Blackshades Stealth.

Great product and worth the money.

PM me if you need assistance or have any problems.

Loved the detail in your review Phil!

BlackShades Stealth is personally my favorite BlackShades product.

Nice review! Seems promissing. Will wait for some more reviews before I'm going to buy it :)

Heard about this product. Some questions:

Is it true the stubs are java and the client is C+?

Does this work like an automatically setup PHP RAT?

It is stable, but how are the speeds?

What are the portforwarding needs?

u?op ?pisdn - October 31, 2013, 1:14 am

Loved the review, very clear to me. Thinking of buying it.

The client is in Java, which means you can control from Mac/Linux/Windows.

The stubs are in C, so no dependencies at all, which means higher execution rate.

It's already all setup, you would only need to compile your binary file. It's not like a PHP RAT.

And yes, it's very stable with AES connection encrypted for stability and security. You need to portforward too.

Feel free to PM me for questions if you have any about Blackshades Stealth.

SIM-1723889 - November 16, 2013, 2:40 pm

does it really differs, say, from netwire that is also in c or some old delphi projects thay are still also viable so far

893249123 - November 16, 2013, 3:36 pm

Damn, now that I think of it, BlackShades looks fucking amazing, I will most likely buy.
