AdFly Bot

This is my first post, I hope its not trash. If all goes well I have more to add.

This is just something I put together. It's really simple and can be edited to do much more.

It has a built in proxy switcher, you can add more proxies to the text file. It picks a new proxy before every click.

I know its not amazing but I wanted to make my first post.

So instead of just posting the exe I thought someone might benefit from the source.

Well Its a good start from you,

This shit is really working. You have done a grate work here. Keep it up.

And those who dont know, using proxy will get your account banned.

if possible then use them on bots and you will get good income from them.
