I might very well be receiving the 1Gbps servers today as well

As of current, the VPS1's are sold out everyone, will edit thread later today

Thepain7x - November 11, 2013, 5:32 am

I bought vps-1 some days ago.

And yes it hits very hard, its perfect for ddosing.

AnonScripts - November 11, 2013, 5:53 pm

Can I use these servers for spam, can I get lower disk space? Please pm me with the answer!

AnarchySyN - November 12, 2013, 4:18 pm

On the real fluffy is a true dude I vouch for him I bought one of services for ddosing and spoofing and this sh** hits like a champ cant go wrong wit Fluffy.

GamingDream - November 13, 2013, 3:45 pm

What is your skype? So, I can contact you!

ItsFluffy - November 13, 2013, 5:01 pm

I won't advise you to use these servers for spam purposes... it's not generally the best idea and since I don't know for sure it'd be you risking your money without refund so I can't guarantee an answer on that as it hasn't been done previously

@GamingDream, simply get 10 posts, enable your pms and message me on here

GamingDream - November 13, 2013, 5:20 pm

Alright. I really want to get these servers for my stresser ;D

ItsFluffy - November 13, 2013, 5:23 pm

do you know how to set up the servers properly and you're just looking to order or?

GamingDream - November 13, 2013, 5:29 pm

Yes, I know how to do it. I have my own stresser <http://dreamstresser.com/> , but some help would be awesome because my list and my files are bad and old.

ItsFluffy - November 13, 2013, 5:36 pm

hm, ok, well I have lists I can offer and not sure about your files so we'll work it out

Are you still selling these, how much will it hit with cyph's AMP List. Can you give me a update image over personal message!

ItsFluffy - November 23, 2013, 9:19 pm

(Nov 23, 2013 01:13 PM)Wisp3r Wrote: [\[CITE\]](#) Are you still selling these, how much will it hit with cyph's AMP List. Can you give me a update image over personal message!

you will need to get 10 posts and enable your pms to message me

and unless you have a 20Gbps dstat graph to test on, I don't, so every dstat so far will max out the single servers ability.

In other words, if the server like I tested is only 1Gbps, it will max out that port and not read any higher so I can only provide a dstat to which the test server can handle.

How much for the 1GBPS servers? Is it realistic to expect to get around 15-20gbps on it with a decent amplist?

It probably won't do 1 full Gbps I suppose ... or does it ? :)

The Invoker - December 6, 2013, 12:07 pm

Not sure that will be happening anytime soon. They just switched him over to his own node all of which have the same port speed.

ItsFluffy - December 6, 2013, 5:24 pm

@ skeepas, yes with a good amp list and attack script with 1Gbps port you can reach that type of power

@Balloon and BTR, when there are enough clients with the 100Mbps servers and enough people would like to message me or post requesting the 1Gbps, we will be installing a DEDICATED 1Gbps line to the datacenter with dedicated nodes for these clients only.

the win vps are for ddosing also? is there a power difference?

ItsFluffy - December 8, 2013, 12:10 am

the port speed on windows servers are same as linux, different nodes

the servers aren't only usable for ddos i just offer that as an option as i know many hf users need servers for dos'ing

well im not sure what you're using but there is no amp'ed sudp, sudp doesn't use amp but dns amp and chargen does

anyway, u shud be able to reach 20G with the new ports

(Dec 17, 2013 04:22 AM)skeepas Wrote: [\[CITE\]](#) Any update on when the new 1gbps servers available?

yup
Jan 1st we will have 1Gbps vps and dedi's
We are encouraging continued purchases of these servers at this time
We will have approximately 60 high end dedi's at approximately 125 (might change) and there will be upgrades to those dedi's available
We will also have similar vps with 1Gbps ports available
All servers will continue to be on a shared network but the cabinet in the data center will be dedicated to my clients only and as we progress we are already planning on a full 10G line install asap

i would imagine at this point it might simply be a port upgrade option but i will continue to post updates once i know more. we have two weeks til updates so any questions any of you have until then feel free to post and ill answer as best as i can.
so for pricing, it could be a \$10 upgrade option or we could setup all new vps servers, not 100% yet but it wont be \$50 for a simple server that much i do know.

ItsFluffy - January 6, 2014, 6:02 pm

there r people who want to spend \$20, \$20, \$20 to ddos 24/7, that is not how server hosting works especially with this stuff.

We're going to eliminate issues by maintaining our products and having the financial backing to do so. In other words, if something fails or an issue arises, it will be much less a concern to help out a dedicated customer willing to pay for real service than the willingness to help someone wanting a cheap answer to their abuse.

I hope that makes sense

pachia - January 7, 2014, 1:57 pm

I own multiple servers already but I saw how cheap the VPS 1 package was.

I bought the "VPS 1" expecting nothing special since I already own a couple dedicated servers. I was pleasantly surprised when it output 90MB/s using 33% of it's resources.

$90 \times 3 = 270 \times 8 = 2.1\text{Gbps}$.

Pleased with the results and will probably keep this VPS as a home connection stresser.

Vouch for Fluffy's hosting.

The real issue is Cogent, our ISP. They complain about all types of hack content like some bots. They have major issues with scanning like dns etc. So the more info you're able to provide usually the more info I can give.

Not exactly a hacking software, but a spammer it scrape links and then post comments on most of them, is a link building software let me know if i can use it or not i wouldnt like to get my account banned from your services after a day or so...

I agree and I wouldn't want you banned either

If you can either post or pm me a proper description of what the software does and how it performs then I can speak with Cogent etc to see if it'd be considered abusive content.

I know that mail spammers aren't allowed due to abuse reports to cogent so if it's similar then I know the answer to that but if it's not like that then feel free to give me more information and I will certainly look more into it for u

ummm i will put my eye on this thread beside the other one but don't you think you're over priced or this normal for spoofing servers

i have seen other threads are cheaper :) but we all know QUALITY IS QUALITY anyway if u could send me your skype that would be nice

ItsFluffy - April 11, 2014, 11:28 am

initially we had lower prices for new host introductory prices but we had so many buyers it trashed our network

we raised our prices to a level that is still under-par for the quality but affordable to most

we try to weed out the chronic abusers who are out for 5-10\$ cheap @\$\$ server that they can abuse and saturate

we have higher quality clients now and hope to keep it this way

spoofing requires much heavier server and network resources so a company offering very cheap prices, ull get cheap performance

Adel1337 - April 11, 2014, 11:32 am

i know i didn't mean to be 5 10 price lmaoo i meant a little discount codes like 8 % 5 % would be awesome to attract people !! i gonna be one of em

yes i understand and perhaps when we expand to our 5G and 10G network we will consider doing this but as of current our prices are actually listed at the discount prices to maintain certain clientele

when funds are sufficient to expand we will do that and be that much better

windows 18\$. I assume that those allow IP spoofing as well (yes I'm aware that there are complications on windows).

How much can they spoof to? I know some dedicated servers that can start at 1gbps and can be spoofed to 40gbps or more. I'm just looking around at different servers before I decide.

ItsFluffy - May 4, 2014, 6:50 pm

the 40Gbps was with ntp which is highly unlikely now b/c ntp is rele hard to come by now
i mainly offer 100Mbps but can do 1Gbps if you don't issues with price
all dedi's all special order b/c they're put on a separate line from rest of network

Vouch for itsfluffy hes very friendly and i would recommed everyone to get there servers from him.
Thanks ?

christi - May 13, 2014, 2:42 pm

So here are my impressions.

pros:it spoofs

it's cheap (not as the actual provider but hey you can't expect them to publicize spoofing on their webiste)

cons:there's a hard limit of 25000 pps: when you hit it, all output is blocked until you stop your flood

I asked for windows server 2012, got 2008, and it's not being corrected

you cannot spoof reserved ip addresses like 192.168.x.x, but that is a rare thing.

For the budget (18\$ windows vps) it's a good product.

Either I added the wrong one or you didn't accept me yet.

ItsFluffy - July 7, 2014, 12:28 pm

you may have added the wrong person
there r three fluffy's i know of
my title bar says apocalypse stresser
i will bb in a couple hours

step1step2 - July 7, 2014, 2:42 pm

I have added all 4 ItsFluffy's. One of them must be you. :-X

ItsFluffy - July 7, 2014, 6:27 pm

as i said just double check the name/title bar as mine is very different making me obvious

step1step2 - July 8, 2014, 6:52 am

The Away can only be seen when accepted. Anyways, you accepted me now. When your online, we can talk about the server. :-)

German Shepherd - July 8, 2014, 1:15 pm

I PM'd you about a dedi. Message me back when you have time!

ItsFluffy - July 8, 2014, 1:16 pm

thanks for posting both of you
I have a dedi left so whoever gets it first, it's yours

Please come back online in skype and tell me your PayPal email adress.

sagbot123 - July 14, 2014, 2:25 pm

sir i want to order dedicated server. please reserve my 1 slot. i realy need that server. ^_^

ItsFluffy - July 14, 2014, 2:28 pm

when u have 25 posts you will be able to pm

until then, what kind of server r u wanting

the expensive 1G or the 100M?

sagbot123 - July 14, 2014, 4:40 pm

i will ready my payment tell me how much 1G and 100m. can we skype so that i can reply fast.

ItsFluffy - July 14, 2014, 5:06 pm

the 100M are \$120 and the 1G are \$310

i will be adjusting the thread layout in a couple hours

sagbot123 - July 14, 2014, 5:28 pm

ok sir. i will pm you if my post 25. i want thissssss! :D

thanks for the recent vouches guys

sagbot123 - July 18, 2014, 12:07 am

hi fluffy do you accept paypal? please reply asap thanks!

ItsFluffy - July 18, 2014, 1:22 am

for the dedi's i do not accept paypal as the servers are purchased through bitcoin

dienofail - July 22, 2014, 10:27 am

Interested in VPS 1 (if you still have any in stock). Added you on skype.

ItsFluffy - July 22, 2014, 11:13 am

Just curious is spoofing enabled on VPS as well?

Also, can we buy the \$120 dedicated server via paypal or is that BTC only? Do you have any of the \$120 in stock atm?

ItsFluffy - July 22, 2014, 8:40 pm

i have two of the \$120 dedi's currently available as a previous client didn't opt to rebuy

So yes those are available if bought right away

and the dedi's are strictly btc for safety or transactions

Nednarb - July 23, 2014, 8:54 am

i nednarb will not chargeback under any circumstance at risk of ToS violation and scam report

ItsFluffy - July 25, 2014, 2:58 pm

Sales will remain open as long as I can muster :)

I will be able to release brand new non-reseller 1Gbps vps soon
Stay tuned

step1step2 - July 31, 2014, 6:10 am

you are away since a week i paid for the dedi + setup. its been more than two weeks and its still not set up. i didnt use the server once. fking frustration.

ItsFluffy - July 31, 2014, 2:27 pm

your server was 100% setup, and you even used it so much you overloaded it in a severe way just as well, i havent had any vision for 4 days and counting so i have friends replying to pms for me my eye surgery isn't healing very quick

step1step2 - July 31, 2014, 4:48 pm

i ment the api setup, not the server setup.

step1step2 - August 2, 2014, 11:46 am

Hes foxing the api now, cant wait till he finished :-)
+1

ItsFluffy - August 2, 2014, 4:09 pm

thanks for posting your update
the servers are still working well
i have 4 servers available until tomorrow night

step1step2 - August 4, 2014, 7:28 am

cant pm you anymore. getting permission denied right now.

my friend changed the password because someone else was using the server, guess it was you. just add 1 at the end of the current password. why did you disable pm's? its quite annoying.

ItsFluffy - August 6, 2014, 6:26 pm

i didn't disable pms i was temp banned because someone made a mistake on my account not worth getting into
im back now and will try to setup ur stuff tonight

Damn , last time I checked the 1Gbps Dedis went around \$150, now the price is \$310 ? ?

Wow ? Really wanted to get one of these now but \$310 is scary price ?

ItsFluffy - August 17, 2014, 8:14 pm

310 is rough for some people i know
i have a few of them and the billing is a hit to the wallet but they're worth it

im always looking for other datacenters which spoof but they're very difficult to come by

Different DCs and different specs and different bandwidth limits
I'm going to be acquiring a new DC hopefully tomorrow as well which is when I'll be updating the thread hopefully I just need to clear some things up first
But I've certainly learned you get what you pay for with the freakish limitations of hosts spoofing nowadays

Of course, and you're right, I didn't look much at your specs I just saw the price. I'm sure you certainly have a lot more benefits than they do regardless.

ItsFluffy - August 19, 2014, 9:19 am

Yup
I have just worked out a deal with a new DC which offers 100M and 1Gbps for far less prices but bandwidth specs are slightly different
The prices range from \$80 to \$300+

100Mbps is unmetered
1Gbps is a 30TB allowance and it's setup for me so that when the 30 is used, it will go to 100Mbps unmetered 'til next pay period

I would recommend DC 3 or 4
DC 4 might be best but either one should accomplish exactly what you're seeking

DC 5 is always going to be the best but the bw is more limited

yes but few can offer the bandwidth at the prices i do
they tend to offer the standard colo of 10TB which won't last for sst users

If yes please PM me prices.

To get total DMCA ignored i'd go with the offshore DC3 option

As for the extra ips and cpanel etc, I'd have to double confirm with them

Now take note that DC3 is the single biggest pain in the @\$\$ with their support so I try to have people stray from them but i offer it b/c it's what i use to scan with

yeah vps won't get done what you probably will want

i can offer my \$45 dedi but these are the lowest prices i can possibly offer

i can help setup depending on what u need

me and a friend made a script to help with just this sort of thing for new server setups

XxRubyxX - March 12, 2015, 3:30 pm

would a vps work for a vpn or no? i just on a tight budget

i figured for the ddos amp ill need a dedi i want to get about 30gbps amp attack

ItsFluffy - March 12, 2015, 3:32 pm

you mean can you turn a vps into a vpn?

of course

99% of vpns, well ok not that many, are vps

is that what you need to do is make a server into a vpn?

XxRubyxX - March 12, 2015, 3:34 pm

well i was gonna just get one dedi and have stresser for myself and a vpn combined but i foundt out it would not work. but ina sense yes dedi for ddos and such but vps i dont think it matters as long as it has a good ddos protection setup on it.

but like i said im new just dont want to dump a ton of money into this

ItsFluffy - March 12, 2015, 3:37 pm

ok, for vpn i will refer you to hf user GuyCheap, he's an excellent developer/setup(er) (lol) for openvpn servers and he can get you a nice setup with ovh for ddos protection or you can buy a vpn login from my partner and i

as for the dedi, yeah you won't probably find better servers than from me but there are a lot of sellers trying to do the same thing as me now
what are your intended targets for attacking?

XxRubyxX - March 12, 2015, 3:40 pm

Well mostly for people on xbox and such, i want it to be so hard hitting that no one will mess with me, having a jtag and such is well a dangerous thing these days lol. people hit people off quiet often and well i want to fight back if it happens and make them regret it. how much is for a vpn slot?

ItsFluffy - March 12, 2015, 3:44 pm

well for XBL it will be cheaper if you purchase a login to my site as no other service offers the home connection guarantee like i do but having ur own server can work too it's up to you

<https://hackforums.net/showthread.php?tid=4501568>

the vpn you can check here

<https://hackforums.net/showthread.php?tid=4714698>

and for the record, i too knock off jtag modders when they face me lol

XxRubyxX - March 12, 2015, 3:45 pm

ok, i just want to be not limited by the time that i can hit and or hold off, would your service do that and as for vpn ill look into that link

vpn looks good how much it rated for to migrate?

ItsFluffy - March 12, 2015, 3:49 pm

(Mar 12, 2015 03:45 PM)XxRubyxX Wrote: [\[CITE\]](#) ok, i just want to be not limited by the time that i can hit and or hold off, would your service do that and as for vpn ill look into that link

vpn looks good how much it rated for to migrate?

the vpn was upgraded to 700Gbps protection (as in the title)

i believe this is mainly layer4 mitigation but u shouldn't rely need layer 7 for a vpn and i can setup a custom plan on the stresser but it is not unlimited no

XxRubyxX - March 12, 2015, 3:54 pm

what would the custom plan hold that is within my price range?

i mean if i wanted a hour or 2 max boot time and could do it repetatively would i be better off with a dedi?

ItsFluffy - March 12, 2015, 4:10 pm

yes if you want to spam attack you'll be better off with a dedi

now granted that if they're only home connections ull be fine even if a port limit should occur but i can set u up

XxRubyxX - March 12, 2015, 4:11 pm

is there any way to prevent tport limiting?

ItsFluffy - March 12, 2015, 4:18 pm

dc2-3 don't limit b/c they're 100Mbps but dc4-5 i don't get limited for 50TB+ for ddosers

the reason is b/c people learned about resellers of dc4-5 and they learned about people abusing their bandwidth so they set new standards

XxRubyxX - March 12, 2015, 4:27 pm

so u dont get limited as long as t get 50 tb of bandwidth correct? and how much would i be looking at to a not get limited and b for being able to launch 20gb of amplification and or how would everything work in general.because doesnt amp list and such get ineffective very quickly and can a 100 mbs do 20 to 30 gb amp attacks? if not how much total would i be looking at for that power and such and which dc would be in my budget?

or can the datercenter2-3 hit harder then 20-30gbps or can the datacenter 4-5 hit harder then even that?

ItsFluffy - March 12, 2015, 4:33 pm

100Mbps can max at 8Gbps with a supreme ntp lists

1Gbps can do 30-40Gbps with good ssdp or ntp lists

50TB will run about 170 for atom server and 200 for xeon server, yeah it isn't super cheap

however as mentioned even u get limited which attacking for an hour or two at a time you probably will, it'd still be enough power to down home connections but the real issue you'll have is running out of bandwidth due to the amount of attacking you'll do

id more suggest u go with dc2 than anything but it's up to you b/c it'd be unmetered and amped u can down ur home connections

XxRubyxX - March 12, 2015, 4:39 pm

so it'll be 170 to 200 no matter which way i go with dedi correct?

and how much would a custom plan on ur stresser go for if i wanted to hold for awhile and or could not spam but do it somewhat often?

ItsFluffy - March 12, 2015, 4:44 pm

well the stresser you can find here and decide if those plans work for you

<http://goo.gl/At1K2z>

for the dedi, as i said, those are the 50TB prices for dc4

u can go with the 100Mbps DC and it will work perfectly fine for your needs honestly

XxRubyxX - March 12, 2015, 4:46 pm

how much for the 100mbps ones a month?

the stresser does not have a hour boot time and i want to have that hour boot time up my sleeve, im definitely getting the vpn tho

ItsFluffy - March 12, 2015, 4:53 pm

yes i can make a custom hour attack time but it isn't cheap

ive only ever done that for 2 other users who buy every month so i allowed it for them

and the 100Mbps dedi's are available on dc2 and dc3

the advantage of dc2 is that u get about 30TB of 1Gbps port until they detect ddos, they wont suspend they just bring it to 100Mbps unmetered

XxRubyxX - March 12, 2015, 4:55 pm

tell me the price for the stresser and for the dedi, and ill let u know if i can do that

ItsFluffy - March 12, 2015, 5:01 pm

for the stresser let me know how many concurrents and how many seconds and the frequency u intend to use

for the dedi, quite literally the prices are listed

XxRubyxX - March 12, 2015, 5:09 pm

stresser 1-2 between 1-3 hours if its in the price range of 30-40 or little more and frequency that varies very much on who im playing against and who the people are. if its above 45 i cant afford it currently but when i get a job again then im sure i can

ItsFluffy - March 12, 2015, 5:26 pm

yeah i can't do an hour or three for 30-40 b/c it'd be too much cost for bandwidth vs funds is the max you can spend this month 45\$?

XxRubyxX - March 12, 2015, 5:34 pm

yeas it is the max i can spend unfortantly

ItsFluffy - March 12, 2015, 5:38 pm

(Mar 12, 2015 05:34 PM)XxRubyxX Wrote: [\[CITE\]](#) yeas it is the max i can spend unfortantly

ok then the best option for you will be the \$45 dedi and see how it works out for you

it wont be a LOT of bandwidth for you but we can see how it goes depending on ur usage it might be enough

XxRubyxX - March 12, 2015, 5:47 pm

will everything be setup for me or is that extra if u do it on ur end? so itll be good to go and i wont have to do much?

but im definitely interested in this and such

ItsFluffy - March 12, 2015, 5:57 pm

depending on what u need setup i can do a simple setup for you

Connected - March 12, 2015, 5:58 pm

PM me for your 1 Gbit Unmetered dedi's.

Price for 4 of them.

XxRubyxX - March 12, 2015, 6:00 pm

something simple that can give me the most power and the simplest to use

ItsFluffy - March 12, 2015, 6:03 pm

well ill assume you'll just be using putty obviously and i can set you up with dns method so it will last longer than 2 days

@connected, you've been pm'ed

XxRubyxX - March 12, 2015, 6:05 pm

yes and will i have to update the dns or can it self maintain?

ItsFluffy - March 12, 2015, 6:06 pm

(Mar 12, 2015 06:05 PM)XxRubyxX Wrote: [\[CITE\]](#) yes and will i have to update the dns or can it self maintain?

you'd have to update which costs \$5 from me or you ca buy from someone else but they tend to charge more

XxRubyxX - March 12, 2015, 6:07 pm

u accept paypal? and if so can i do it as a good?

and also when i get it can u run a dstat on it so ik exacly how hard itll hit

ItsFluffy - March 12, 2015, 6:11 pm

there is no dstat graph available to anyone to show testing unfortunately

as for paypal, ud need to provide documentation proof of no refunds and you'd have to send as family or gift not as good

XxRubyxX - March 12, 2015, 6:15 pm

ahh): umm why no dstat? and what documentation would u need and send as family thats a issue everything running through my grandparents paypal, and they really arent hip about the family or gift. ive never got anything through hf.

ItsFluffy - March 12, 2015, 6:16 pm

bc i can't accept as goods or itll take 21 days to receive the money and i dont think u want that and because i show u the port usage from the server but there literally is no graph to attack to show u output

XxRubyxX - March 12, 2015, 6:18 pm

ok sorry like i said this is the first dedi ive had or attempted to get and ahh i forgot about the friends thing and as for docoments idk my grandparents might not like that

the whole showing about the refund thing

but if the refund thing isnt a issue ill get it

Muddaland - March 12, 2015, 10:06 pm

if you read the details of the servers it tells you

the low price is 10TB

the high price is 100TB

i can do unmetered but it's so expensive most don't want it

I'm really not sure if that's a troll or what but if not, that's why there are amp methods

-Chargen, SSDP, NTP, DNS, etc

To get the 40Gbps+ power on a receiving server or in the case of the graphs, multiple servers balancing the incoming data to read out
