Thread: [Modify spam filter](#)

Mafugsa Bob - November 2, 2013, 11:36 am

In the coding sections indentation is very important, but the spam filter removes characters that are repeated > 5 times(?), so most indentation screws up, especially in the Python section.

PHP Code

```
<?php
```

```
class SomeClass
{
    function SomeFunction()
    {
        if(someCondition)
        {
            if(someOtherCondition)
            {
                for(some; con; ditions)
                {
                    if(someOtherCondition)
                    {
                        echo someVariable;
                    }
                }
            }
        }
    }
}
```

Omniscient - November 2, 2013, 1:36 pm

I'll think about making forum exceptions in the coding area.

Mafugsa Bob - January 11, 2014, 6:55 am

Bump.

Nothing has changed and reading code is still a pain in the ass.

'Snorlax - January 11, 2014, 7:19 am

[Remove the character repeat spam filter... PLEASE](#)

Quote:I'm just gonna give the same answer. It's been suggested, and it's been denied. But for now, I'll close this thread and if Omni feels it needs to be address, he can reopen/reply to the closed topic and leave a response, just saying though, don't hold your breath.

Made a thread a few days ago. It got denied.. :/

I would also like to see this, it seems extremely beneficial.

That'd be pretty cool, however, you made the post a while ago.

Are you still thinking about doing this?

I've adjusted it.

Omniscient - January 11, 2014, 9:06 pm

You should now be able to do 6 repeating characters before it's cut. If you go over the 6 repeating characters it will but it back to just 6.

Douchebag # 145 - January 11, 2014, 10:14 pm

I just want to say this was an awesome suggestion and I'm glad Omni went through with it.

ZOMG more characters. No more broken color BBCode! Woot!

Mung - January 12, 2014, 9:22 pm

Thankyou Omni, much of a help.

I started getting frustrated aswell because when I did this at the end of my sentence '...' it cut it down to '..', which my OCD went AWOL over.

Wooo!

1n9i9c7om - January 12, 2014, 9:37 pm

Thanks, Omni. :)

However, 6 isn't that much when you use spaces instead of tabs in your code, but I guess I'll just change it to tabs then. :P
