#1 I don't force anything, just an option for people's preferences.

#2 From what I noticed not many care about size, look at instance "razor crypt" size is big yet

nobody cares?

Yes i won't say anymore, my bad, mate.

I'm pretty sure he has added an option to choose if UPX is enabled or not.

Your last sentence is a bit offtopic and has nothing to do with the crypter, does it?

In my opinion it's a very excellent Crypter, I know Miki I saw him doing stuff in Visual Studio

And he is really cares about service, he is always available for support if he is able too.

Size matters a lot, that is one of the reasons that i don't buy Auto it crypters. and of course it's execution rate on all OS. but it depends on the coder, i didn't test yours yet i hope it's very good

No it's not overpriced at all, 120\$ - 6 Months - 10 people (even less the better) means a longer FUD times. TBH best price I've seen on forums for a private 10 people crypter. I might be launching 1 user crypter for 180\$/month. -- Now that's cheap.
