Thread: [Change/edit web page content with hack?](#)

RARA182 - November 5, 2013, 2:09 am

Hey guys, so here is my question: I would like to change and edit something on a specific web page, you know something what you can also do with greasemonkey and such stuff, but it should not only be for me. So I don't just want to make a "local change", so the edit is only shown on my browser, but i want to make the edit visible for "the whole internet". I just want to make a very little edit, btw. It would be very, very nice if somebody could explain possibilities, how something like that could be done. Thank you very much! ?

Search HF "How to deface a website"
and continue from their and start to study its methods.

Hey, there's a reason I don't want to publish the website's link. I tried to PM you, but it says I can't as I haven't reached 10 posts yet. If you can help me, it would be great if you could give me your skype or something, so I could explain everything more fully to you? Would be perfect. ?

Is there another possibility to "deface" a website, than sql injection? I mean, what can you do, if the website is not vulnerable?

?SnorlaxTheAllah™ - November 5, 2013, 8:13 am

If your willing to post its link, I'm willing to help.

Edit: Saw your last post... Get 10 posts then PM it to me.
