Thread: [Free E-mail that doesn't require phone number, stealthy, private, doesn't rat](#)

Ziploc - November 6, 2013, 4:54 am

Anyone know of a good 'underground' e-mail service.

Razorgecko - November 6, 2013, 4:55 am

Yes Yahoo, it doesn't require a phone it is private, it will never rat you and I don't know what a stealthy e-mail would be.

Seriously tho, just create a random e-mail if you don't want to be traced... I can't understand why else you would want one.

Hunter Kh - November 6, 2013, 4:56 am

you can try this one bro <http://mail.ru/>

Register through VPN and always stay behind VPN while using such emails

Caseus - November 6, 2013, 5:00 am

Try hushmail out, it might meet your needs.

PouZ - November 6, 2013, 5:09 am

I strongly recommend hushmail. Hope it helped :)

ca1n - November 6, 2013, 6:34 am

hushmail is right up there, but just a note... you need to log in at least once every 3 weeks to keep the account active & with an unpaid (free) account you only get a small amount of mail storage space (25mb I think).

Good luck

Peredur - November 6, 2013, 6:44 am

Basically, to avoid the NSA snooping on your logs and such, any CIS email service would do, like .ru, .ua, even .ch, as long as they are not owned by some big company in the usa. A good example would be to use i.ua or mail.ru

Mail.ru is nice.

RULE? - November 6, 2013, 6:44 am

How about Tor's email services? Could be what you are after.

Ziploc - November 6, 2013, 9:55 am

You need a cell phone for mail.ru ..

Mail.ru is nice.

Wow! ...This was news to me, and a bit of a surprise. I think a lot of us have had misplaced trust in Hushmail. I'll be making the switch to .ru

Thanks for the enlightenment 0x ?

Don't use this, definitley don't if it is for blackhat activities. Very easy to Subpoena the emails there, not sure how to word it right but, they can easily get IP logs and access to the email if they want.

Use ; mail.com it's good and you can choose from TONS of email extentions.

MasterBlack - November 6, 2013, 11:13 pm

Just use a normal email service then use OpenPGP for all your emails, making sure you keep your private key PRIVATE.
