Thread: [Darkcomet 5.3 \[Slaves can't connect\]](#) [\[Pictures\]](#)

muskelmorfar - November 6, 2013, 1:28 pm

When I run my RATvirus.exe in sandboxes it doesn't appear in the list, but the program is running.

Settings for my RAT:

[img]http://piclair.com/data/8u7w3.jpg[/img]

[img]http://piclair.com/data/v36ys.jpg[/img] (My no-ip is exactly the same and active, I also tried with my friends NO-ip)

[img]http://piclair.com/data/hc61h.jpg[/img] (Adding this message just to try, didn't work without either)

[img]http://piclair.com/data/3l546.jpg[/img]

Everything else is original. I click "Build The Stub, I don't click "Generate" (last picture).

I right click on RATvirus.exe and run with sandboxes.

[img]http://piclair.com/data/p2krg.jpg[/img]

This window comes up, but nothing shows up in the list.

[img]http://piclair.com/data/xkiwu.jpg[/img]

Picture that shows that I'm listening at port 1604.

[img]http://piclair.com/data/c339k.jpg[/img]

Picture from canyouseeme.org

[img]http://piclair.com/data/a2vv4.jpg[/img]

Everything works fine with local IP, but doesn't work with NO-IP.

Any ideas? What do you recommend me to try?

dabmaster6000 - November 6, 2013, 1:45 pm

u dont have 127.0.0.1 in your network setting so u cant connect back to yourself also do u have no-ip duc setup

marmalade57 - November 6, 2013, 1:51 pm

I have spent hours trying to solve the same problem. I test a server and it works then a hour later it sfails to show up. I found by closing everything down and starting all up again it worked again. I keep a tried and tested server for this purpose so I know its good. At first I thought oit was a problem with no-ip then then the forwarding on the vpn.. then the router port forwarding but I have recently found that by killing sandboxie and restarting it the servers started to reappear again. So I suspect that may be where the problem is. Slave servers have been no problem....Going to try a fdifferent sandbox to see if that is any different

(Nov 6, 2013 07:02 PM)Frostix Wrote: [\[CITE\]](#) Follow this [tutorial](#) on how to set everything up. I know how to setup Darkcomet, I have been a customer for a long time.

I followed theese steps asweel, without any results. Started over from beginning. Still same problem.

Thanks anyways :)

Any other ideas what the problem might be?

(Nov 6, 2013 09:56 PM)Frostix Wrote: [\[CITE\]](#) Scroll up to the prerequisites in the portforwarding section and see if you didn't do any of those.

I dubble checked them now, still don't work. Thanks for trying too resolve my problem, I really appreciates that!

Anything else you think can be the problem?

Everything works fine with local-ip (127.0.0.1) but don't works with no-ip.

Thanks for trying too resolve my problem. We didn't had any luck. Any1 here with more ideas?

I really can't figure out what the problem is. I also uninstalled everything and started over from beginning followed guides here at HF just too make sure that I didn't missed anything.

Still need help! Any ideas? I have teamviewer, skype, microphone etc!

?Dante - November 12, 2013, 5:56 am

Dude! the answer is in the first post, i.e. if you wanna test the RAT on your machine, you've gotta use the localhost's IP and that's 127.0.0.1

Don't use No-IP if you're running the server on your own machine. It won't work. :)

Homothe - November 12, 2013, 8:58 am

Change your no-ip to 127.0.0.1,
Problem solved.

example.zapto.org --> 127.0.0.1

Emoticon - November 12, 2013, 9:09 am

Not sure why everyone's suggesting changing it to 127.0.0.1 when you should be able to use your No-IP host.

I'm able to do it myself without problem.

Although changing it to localhost would resolve the issue, it still doesn't answer why it wouldn't work for anyone else. Your port is open, NO-IP is set up correctly, I have no idea what else would be going wrong.
