SHADOW REALM - November 6, 2013, 11:29 pm

I'm trying to send a message to the user "mad" and it wont let me. The pm i'm sending is this

It wont even let me post it in this thread. Message I'm trying to send (On pastebin)

<http://pastebin.com/KRRrN8D0>

pr3fix - November 7, 2013, 2:48 am

Upload the code to pastebin, dropbox, or similar service.

Send the link to the mentioned user. Win?

I did, but it shouldn't have to be like that. We are a hacking forum

If we can't even have basic hacks in it then we are in trouble

We can't even write ' or '1'='1

Without the slashes

pr3fix - November 7, 2013, 7:28 am

I agree, maybe the Omni is a bit too sceptic, but maybe it's for the better.

Viral Dragon - November 7, 2013, 7:37 am

The problem is with your code at the bottom.

```
Code system("unset HISTFILE;
unset SAVEFILE;
unset HISTSAVE;
history -n;
unset WATCH;
export HISTFILE=/dev/null ;
echo ---=Sy/ste/minf/o==-- ;
u/name -a;
echo;
echo ---=Uptime==--;
W;
echo;
echo ---=Userinfo==-- ;
id;
echo;
echo ---=Directory==-- ;
pwd;
```

```
echo;  
echo --==Shell==-- ");
```

Take out the slashes of course - but that little tidbit is why it won't let you post.
It's various words in this small tidbit of code. Like : (If it has a slash in it, it's a keyword).

```
u name  
system info.
```

-Viral.

I actually have some of the SQLi stuff disabled in the CF WAF because I have local protections against SQLi as well. I know it was greatly disrupting the PM and posting system before but it should be fine now. Sure you can still trigger rules and in those cases you should just use Pastebin.
