Thread: [Installed win 7 bug.](#)

tobbiass - November 9, 2013, 1:49 am

Hello

First of all, I just finished by downloading windows 7. I did that cause my computer went extremely slowly and I didn't want to have all the files anymore, they were useless. But I did it through an USB and I downloaded windows 7 usb tool and began to download the windows throughout the bios. When I have done anything and got to the windows, there was a weird thing.

-> Problem: The "windows" (background) doesn't match with my screen. It's nothing about resolution, but it seems something about the windows, it doesn't refill my whole screen, please help me! I am depressed about this.

Best regards
Tobias

Im not sure what are you saying?

Do you say when you booted win 7 install it doesn't fill your whole screen. If you mean by that don't worry it will adjust when you install Graphic Drivers.

Corso - November 9, 2013, 3:23 am

As Pink said, this is likely related to your Graphics Card Driver. I recommend you try getting the latest driver for your card and then re-adjusting the resolution, which will reset the image in the proper value corners.
