Thread: [Post count doesnt work?](#)

Ajs Nigrutin - November 9, 2013, 3:15 am

Before i started posting i had 1,94 post per day but for 3-4 days im writing at least 7 posts a day and it didnt move at all.I know post count doesnt rise rapidly but im not sure is it working at all.

Sorry if im wrong.But its always good to ask.

Thanks in advance!

.Matt - November 9, 2013, 3:21 am

The post count works as follows as far as i know, number of posts divided by days online

So, Even if you post 50 posts a day your post count wont rise much unless you're a new member. Check Paradoxum, he frequently posts 200 posts per day and he has no where near that in avg post count

It's because you've been a member since November 26, 2010 but only made 2098 posts.
1079 days have passed since then.
 $2098(\text{posts}) \div 1079(\text{time elapsed}) = 1.94(\text{posts per day})$

Hope this helps, you just need to post a bit more until you can reach a higher PPD.

It seems your right ok thanks mate.
Good math logic.
