Thread: [Simple IP tracer \[Beginners\]](#) [\[Source\]](#) [\[No Pm\]](#)

adobephotoshop - November 11, 2013, 11:33 am

It's been a while since I released something to hackforums and considering I made an IP tracer a while back I thought why not give it out ? , Please note, this is beginner work as I made it a long time ago there are many easier ways to approach the task but I decided to take the long route ? , anyway this teaches you the basic concept of splitting and downloading webpages etc, it's not the fastest but I suppose it's the functionality that matters.

pictures:

[img]http://icap.me/i/e2LR7Cf325.png[/img]

Those pictures show the basic functionality of the program, here are Here are the features:Gets all info available on the persons IP

Save Info

Get your own IP

Save Logs

Clear logs

Get website IP

Virus Scan:

There's no such thing as a IP Tracker. Change title to ISP Tracker. Nice program though!
