Thread: [Cinema4D Graphics Problems \[HELP\]](#)

hetr0B3 - November 14, 2013, 12:21 pm

I downloaded Cinema4D and when I run it I get a screen like this.

<http://prntscr.com/245iby>

When it's all ran I have to right click my desktop and click 'Graphic Properties' and change the colour depth to 32 bit from 8 bit, which is current. but when I do that my Cinema4D is still like this

<http://prntscr.com/245jl7>

Once my screen is back to normal (32bit) my Cinema4D still looks like this

<http://prntscr.com/244o0g>

Note: I had pirated this from tpb.me and it's all installed correctly. I don't know if it's just my graphics itself on my laptop but yeah. I really need this removing because for my GCSE were doing GFX and this is important to me.

Thanks!

Chukozy - November 14, 2013, 1:10 pm

I've never seen this before and should be a quick fix if you look for it on google but besides the problem, why do you use R11? Maybe if you updated your software, It would fix itself. ?

Well I pirated it and I couldn't find newer versions Imfao.

Invention - November 15, 2013, 7:15 pm

Run as Administrator? Or just download another version. Here's the pirated one I'm using:

http://#.sx/torrent/7141087/cinema_4D_Keygen_and_setup_32_bit_and_64_bit

Easy as cake! :D

Shibalnu - November 15, 2013, 7:59 pm

The problem is that when you launch Cinema 4D it is changing your color depth.

Before launching C4D, right click on your desktop and open "Graphics Proterties", then select Advanced Mode.

On this screen you will see the color depth options: [http://i39.\[censored\].com/2whkrc0.jpg](http://i39.[censored].com/2whkrc0.jpg) [Tiny Pic]

After launching Cinema 4D, right after you see the start up screen load [http://i40.\[censored\].com/909k4n.png](http://i40.[censored].com/909k4n.png) [Tiny Pic] (I'm using a more recent version) you want to change your color depth to the highest option. It's important that you wait until you see the program starting up like in the previous image before changing it.

Now it should work :) Hope this helps you mate!

EDIT:

The only problem with this fix is that you will have to do this every time you launch the program. I have not yet seen a permanent fix

Red-Devel - November 17, 2013, 7:46 pm

You could always torrent a new version I got R14 on TPB thats really all I can tell you sorry and much luck with your problem

Ethanisnotonfire - November 18, 2013, 12:27 am

I agree with Red Devel, R11 is so out of date and supports nearly none of the 'good plugins' that are out.

KompKiller1 - November 18, 2013, 10:33 am

you either have and older version and the pirater is lying about the version or what is your graphic card specs just go to can you run it select like battlefield 4 and then give me a screen shot of the results
