Thread: [\[FREE DL!\] Genuine Traffic Generator! \(YouTube Views, Website Views, etc!\)](#)

Dreuxx - November 15, 2013, 3:52 pm

Hey, HackForums!

I'd like to share with you guys a free-to-use traffic generator. I've never seen this one on HF, so I would like to post this for everyone to see.

This bot can be used for:

YouTube Views

Website Views

Profile Views on another website

...and the list goes on. Anything that includes views, this generator can do the work for you.

This isn't anything big, or special. It's kinda like a refresher, but this bot can make the speed time go up or down on your command, and you can also put in multiple links in the bot. The bot will loop all those links, until you press stop.

Pretty simple, right? :D

Download Link can be found here:

<http://goo.gl/H1Acvq>

And the Virus Scan can be found here:

Well, thanks for taking a look at this!

If you have any questions, please leave a comment, and I'll get back to you asap. Also, if you are encountering any problems, I apologize, and I'll try my best to either fix it, or post another thread with a different bot if necessary.

If you enjoyed the bot, make sure to leave a positive comment! :D

Thank you for your time!

just dl'ed, will test it soon.

amused to see the Lua dll, sounds good

nice share, thanx

I DL-ed it but it's not working, something related to registering a DLL, I tried to register it via cmd/regsvr32 but I can't :(
