Thread: [Keylogging program I downloaded](#)

Wezzkid - November 16, 2013, 1:17 am

Alright so I did all of these steps from this link [Neptune](#), I even infected someones computer, I entered the correct email address, twice, and I entered my correct password as well. I said send to my email, and it wouldn't. Where it says smtp.gmail.com, I changed to smtp.hotmail.com, is that correct? Now I am for some unknown reason not receiving any of the logs that I infected the person with. Anything I can do to fix this? Sorry I posted here and not in his thread, for some reason it wouldn't allow me to do so.

Any help would be great.

I Know why its not working

the email u use must be gmail or yahoo!!

IT MUST

Thank you I'll try it again tomorrow. Thank god the person I'm infecting is gullible.

I hope you didn't use your primary email account (the one you keep legit stuff on) for the keylogger.

Grimzyy - November 16, 2013, 8:03 am

Yeah only works for gmail and a few other email providers.

Google mail is far better anyways, switch to gmail OP.

Dropbox - November 16, 2013, 8:52 am

i think hotmail and gmail are awesome been using a long time

Nah I didn't and I wouldn't do that.
