Thread: [Design Customizer - Customize the look of HF!](#)

1n9i9c7om - November 16, 2013, 8:47 am

You can now display the old userbars in the new theme!

There are currently no known bugs. If you find one, feel free to report it. It works perfectly together with [HFES](#) at the moment (so HFES won't break HFDC and HFDC won't break HFES).

Tired of seeing the same HF design every day? You want to try something new? Or you just want to add a logo again to HF? Then the Theme Customizer is exactly what you need!

The Theme Customizer can add a custom logo, it can remove the "Welcome to HackForums.net" from the heading, it can place the current time back over the "Open Buddy List" link and it lets you chose a custom theme!

There are currently 4 themes:

Christmas [\(Click to View\)](#)

Red [\(Click to View\)](#)

Green [\(Click to View\)](#)

Pink [\(Click to View\)](#)

(Ignore the tabs. They're in 2 lines because I made Chrome smaller for these pictures)

To install this userscript in Chrome, you need the Chrome extension [Tampermonkey](#).

To install this userscript in Firefox, you need the firefox Add-On [Greasemonkey](#).

[Click here to install](#)

[Theme Customizer's Userscripts.org Page](#)

After you installed this userscript, go to your User CP and you'll see a new link under options called "Modify Theme".

Click it and you'll see this:

Modify Theme Page [\(Click to View\)](#)

Note: You must have the "Modern Purple" theme selected for this userscript. The theme switcher also works on "Modern Blue", but you won't be able to add a logo!

If you're interested, [here](#) are the four logo's I used for the screenshots.

Please keep in mind that this is the first release of this userscript. If you find any bugs or if you have any suggestions, feel free to [PM me](#)!

I hope you like this userscript, I'd love to get some feedback!

1n9i9c7om

Artisanal - November 16, 2013, 8:48 am

Of course I knew this would come. Guess where the idea comes from ? ? Big vouch for 1n9i9c7om.

Freddy Kru?ger - November 16, 2013, 8:53 am

I'm glad you went through with this, Good job man.

w?rloctt - November 16, 2013, 3:17 pm

Very nice job! I really like your work so far. Keep doing this and get better in coding userscripts.

Invisible - November 16, 2013, 5:58 pm

What are the links for the logos? Can't find them.

1n9i9c7om - November 17, 2013, 2:56 am

(Nov 16, 2013 06:58 PM)Invisible Wrote: [\[CITE\]](#) What are the links for the logos? Can't find them.

<http://x.hackforums.net/images/modern/logo.png>

<https://imgur.com/l3avJro,Tmiwasx,MQKlpvq,LW7nyts>

You can use any of these or make one yourself. ?

Invisible - November 17, 2013, 8:27 am

You don't have a red logo for the red theme? :/

Is there a way to get rid of these red outline boxes in posts, etc.?

1n9i9c7om - November 17, 2013, 9:34 am

(Nov 17, 2013 09:27 AM)Invisible Wrote: [\[CITE\]](#) You don't have a red logo for the red theme? :/

Is there a way to get rid of these red outline boxes in posts, etc.?

Well... this is red: <https://i.imgur.com/MQKlpvq.png> ?

Changing the text should be easy. :)

And which boxes do you mean?

By the way, thanks for advertising this userscript in your signature!

Invisible - November 17, 2013, 9:59 am

<https://i.imgur.com/7HlHQjL.png> These

1n9i9c7om - November 18, 2013, 4:40 am

(Nov 17, 2013 10:59 AM)Invisible Wrote: [\[CITE\]](#) <https://i.imgur.com/7HlHQjL.png> These

This could be difficult, because this line is 'connected' with these:

<https://i.imgur.com/kUloiR3.png>

If I'd simply remove the CSS behind it, it'd look bad:

<https://i.imgur.com/Q7R8vS2.png>

However, if you like it like that, I could add that, but otherwise it could be difficult.

Auth - November 18, 2013, 10:02 am

This is very nice, just installed it thanks man:D

Emylbus - November 18, 2013, 11:17 am

Ran across a couple issues in my first few minutes of testing:

1) There's a half-second delay for the theme to kick in due to the script being ran after the page is loaded. You can change that by adding // @run-at document-start to the metadata block. Though if you do that, it'd probably break your options page. For me that's fine for most types of scripts but not things that change the entire page like a theme changer.

2) I tried to disable the theme changer by unchecking the box in options menu and even clicking the

Modify Theme button to presumably save the changes. It didn't work and the theme still changes.

With that said, your themes are sexy as hell. I have plans for HFES to do something similar that would also address the two concerns I listed above. There is a technical challenge I need to resolve first (not sure if it's possible) but if I get it then I may contact you about a collaboration if you're interested.

'Snorlax - November 18, 2013, 12:14 pm

Looks very sexy, Nico! I like the themes a lot, and they're well made.
Good job!

Invisible - November 18, 2013, 2:42 pm

Like Emylbus said, if you can make not it not take a second for the theme to appear that would be awesome.

1n9i9c7om - November 18, 2013, 2:55 pm

I completely forgot to check if the userscript is enabled... oh well...

I fixed this, and I'll try out "@run-at document-start" tomorrow, as it's almost midnight here and I have to stand up for school in a few hours.

Thanks for your feedback. :)

--

I tried @rum-at document-start, it definitely works better, but there is still a small delay because it has to download the CSS files for the theme first.

Guess I'll just add the styles to the userscript. But not now as I got to go to school now... ;)

Invisible - November 20, 2013, 5:32 pm

I see no delay now since you've added it :D

Maybe a tiny bit real quick here and there sometimes

1n9i9c7om - November 20, 2013, 9:49 pm

(Nov 20, 2013 06:32 PM)Invisible Wrote: [\[CITE\]](#) I see no delay now since you've added it :D

Maybe a tiny bit real quick here and there sometimes

Yeah, a really tiny one sometimes, but that's just the time it needs to interpret the CSS, I think.
It's definitely much better than before ?

Assailant - November 23, 2013, 9:36 am

These are pretty fantastic, thank you for creating them.

The HF Glossy Black theme works fine however. Let me know if you need anything.

1n9i9c7om - December 12, 2013, 1:45 pm

(Dec 11, 2013 02:17 PM)#Thunder Wrote: [\[CITE\]](#) The HF Glossy Black theme works fine however. Let me know if you need anything.

Yeah, it's some issue related to jQuery - I dunno why yet, but I'll try to find and fix the issue tomorrow or Saturday.

The Glossy Black theme doesn't use jQuery, which is perfectly fine. I'm just using it for some things as i.e. the snow ;)

Emylbus - December 12, 2013, 1:53 pm

(Dec 12, 2013 02:45 PM)1n9i9c7om Wrote: [\[CITE\]](#) Yeah, it's some issue related to jQuery - I dunno why yet, but I'll try to find and fix the issue tomorrow or Saturday.

For some reason jQuery has access to more things in Chrome than in Firefox, I've ran into that issue numerous times. The only good thing from this is that if you get it working for FF it'll work on Chrome. If you want I can poke at your code and see if I can do anything about it.

1n9i9c7om - December 12, 2013, 2:01 pm

If you want, feel free to help me, would be nice. :)

However, will also try to fix it later ;)

#Thunder - December 13, 2013, 6:11 am

I'm not sure how userscripts work 100% but shouldn't I get an error in Firefox's console?

Emylbus - December 13, 2013, 7:38 am

(Dec 13, 2013 07:11 AM)#Thunder Wrote: [\[CITE\]](#) I'm not sure how userscripts work 100% but shouldn't I get an error in Firefox's console?

Unless you set up Firefox's console in just the right way, you won't get logs from userscripts. It's really fucking annoying.

I fixed the logo changer, install the update. :D

Vexane - December 20, 2013, 12:10 pm

Thanks for making this, since apparently you screwed up on your header, I made another just for fucks sake:

PSD:

<http://ge.tt/2P7F5dA1/v/0>

zRandom - December 27, 2013, 10:02 pm

you should make an orange/black theme

1n9i9c7om - December 28, 2013, 3:10 am

(Dec 27, 2013 11:02 PM)zRandom Wrote: [\[CITE\]](#) you should make an orange/black theme

I agree, more themes would be great. Will add 1 or 2 new times before 2014 ?

If you just want a black theme, you can always try out this script: [\[Userscript\] HackForums Glossy Black Theme](#) by [+mK](#)

I also have to fix the Firefox support...

Invisible - January 2, 2014, 6:40 pm

Is there a reason why when you are using old user bars, sometimes it shows them modern and some times it shows them old?

1n9i9c7om - January 3, 2014, 4:02 am

(Jan 2, 2014 07:40 PM)Invisible Wrote: [\[CITE\]](#) Is there a reason why when you are using old user bars, sometimes it shows them modern and some times it shows them old?

This never really happened to me.

You could try to add this at the end of the script:

PHP Code

```
<?php  
$(window).load(function() {
```

```
if(GM_getValue("oldUserbars") == true)
{
changeUserbars()
}
});
```

Please tell me whether it fixes the problem for you or not. If it does, I'll add this in the next update.

Invisible - January 3, 2014, 7:40 am

Uhhhh...how do I do that? lol ?

1n9i9c7om - January 3, 2014, 8:44 am

(Jan 3, 2014 08:40 AM)Invisible Wrote: [\[CITE\]](#) Uhhhh...how do I do that? lol ?

I uploaded you the script including the "test-fix":

<http://megaviews.net/hf/designcostumizer/hfdcfix.user.js>

Just click this link and it'll ask you to install it.

You don't need it anymore, but just if you're interested -- to edit an userscript you have to open the Tampermonkey dashboard:

Spoiler [\(Click to View\)](#)

Then you click on the name of the script and you can simply edit it ;)

A?n?onload - January 3, 2014, 12:23 pm

Why doesn't my custom logo appear and the actual HF logo appears?

My theme is set to Modern Purple.

Invisible - January 3, 2014, 1:53 pm

Sadly that didn't fix it all for me :/

1n9i9c7om - January 5, 2014, 12:38 pm

(Jan 3, 2014 01:23 PM)deadh0b0 Wrote: [\[CITE\]](#) Why doesn't my custom logo appear and the actual HF logo appears?

My theme is set to Modern Purple.

Make sure you ticked this box:

(Jan 3, 2014 02:53 PM)Invisible Wrote: [\[CITE\]](#) Sadly that didn't fix it all for me :/

That's weird. I don't even know why this is happening to you anyways. The code just replaces "modern_pl" with "blackreign" on all userbars, I don't get what can go wrong there >_>

A?n?onload - January 5, 2014, 1:38 pm

(Jan 5, 2014 01:38 PM)1n9i9c7om Wrote: [\[CITE\]](#) Make sure you ticked this box:

Yes, that is ticked, as everything else works, except the logo.

zRandom - January 19, 2014, 9:39 pm

so have you considered making and orange and black theme?
