SMTP Sender

What is it?

Quote:Send E-Mails from Any Mail-Address to Any Mail-Address!

SMTP Sender operates as a Simple Mail Client and uses "Open Relay"-Servers for sending Mails (also HTML-Mails transmittable).

The Destination-Mail-Address must be a Mail-Address of the selected SMTP Server!!

It is programmed in C# (Windows Only!!) and uses the TCPClient-Class to Connect to the SMTP-Server at Port 25!!

SMTP, Port, Sender, Destination are changable!!

Attention: If Sender-Mail-Domain doesn't exist the mail will be treated as SPAM!!
