Thread: [JNI HELP\(repost from c++ section\)](#)

Ectopic - November 18, 2013, 3:13 pm

hey everyone, i recently have been trying to learn how to use native code in java from an ebook, but im having some issues. At some point the ebook tells me to create a dll from a file with a command, but the command is not recognised.

Command: 'cl -Ic:\java\include -Ic:\java\include\win32 -MD -LD HelloWorld.c -FeHelloWorld.dll'

Error: 'cl' is not recognised....

Another error that i got just now from retrying is : "The program can't start because mspdb110.dll is missing from your computer. Try reinstalling the program to fix this problem."

Please someone help, im in real need of it

Are you on a windows based operating system when running this? Also do you have the C++ packages install on your computer?

?ShadowOp - November 19, 2013, 11:32 am

you need to have visual studio installed for this to work.

Make sure you have that installed and path variables set properly.
