Thread: [Information systems for Information technology major?](#)

oBuRneR - November 18, 2013, 3:47 pm

What is the difference? Are these good majors to pursue and will offer me a healthy salary and career path?

SmokeWeedEatYogurt - November 18, 2013, 6:09 pm

I took this class, pretty disappointing. We did basic 6th grade computer class stuff.. Microsoft word, Microsoft Powerpoint, Microsoft Excel.... Literally easiest class ever. How can you get a bad grade when 90% of the assignments are step by step out of a book.

T0ucaNSaM - November 18, 2013, 6:17 pm

The only thing that is going to give you a solid career path and a good salary in any field is your work ethics and how well you can deliver. You have to go beyond expectations. By producing only HQ work.

Butler3196 - October 18, 2014, 1:38 am

The two are one of the same, but fall under the overall title of IT or, more specifically, CnIT (Computer and Information Technology)

Generally solid IT programs will offer two or more tracks for IT:

1. Informations systems - automating business or human models to reduce human flaw and increase productivity by processing data and turning it into usable information.
2. Networking - building networks, securing networks, understanding network stacks, protocols, the evolution of networking (Vint Cerf and TCP/IP, etc..)
 - > Understanding variables and vulnerabilities associated with network infrastructure that may affect the overall security of protected information and developing the skill set to mediate these problems wisely and efficiently.
3. Some mix of the two, based on chosen inter disciplinary classes of your choosing.

FOR ANYONE LOOKING TO COMMENT ON "GraveDigging" THIS TOPIC IS MY MAJOR, AND CAN BE AMBIGUOUS. I FEEL THAT IT DESERVES A BUMP TO HELP CLARIFY THE OPTIONS TO THOSE PROSPECTIVE TECH MAJORS.
