Thread: [xHostFire, Please Make It Stop \(So retarded\)](#)

SHADOW REALM - November 19, 2013, 1:59 am

Ok boys, Lets waste some more space in the dumping ground people call Marketplace Discussion

Thread: <https://hackforums.net/showthread.php?tid=1869070>

Profile: <https://hackforums.net/member.php?action=profile&uid=76911>

Ok, Lets start with some boring stuff. Like the false advertising

Moneyback Guarantee? Ticket asking for the refund started on the 13th, Still haven't got my money back

Secured and Managed? Kill me now please, I will elaborate on their incompetence later on

Dedicated and Premium? I can guarantee it isn't premium

Professionals who know what they are doing? Please, Make it stahp

Fast Customer Support? I asked for a refund on the 13th, The person who is "In Charge" of their paypal didn't reply until the 18th (lol)

Now for the fun shit, The retards who call themselves professionals

Lets examine some retarded things they have done

1. Running their WHMCS as root
2. Having your permissions set as Nobody (UID & GID 99)
3. Disabling all php scripts that have their perms as 777 (<https://puu.sh/5mVNk/5b1e7a0f1f.png>)
4. Symlinking (RIFK)
5. Always checking their cpanel for security risks? Trying to find le 0-days r0fl? (<https://puu.sh/5mVOx/66e2c05d54.png>)

Holy jeez, Running EVERYONE as "Nobody" is so hopeless. Make it stop

I Am JT - November 21, 2013, 1:34 am

Seems like a good community alert. Thanks for letting us know.,

Orgy - November 21, 2013, 1:43 am

(Nov 19, 2013 02:59 AM)SHADOW REALM Wrote: [\[CITE\]](#) 1. Running their WHMCS as root
I stopped here. What?

Do you mean they're running their webserver as root?

(Nov 19, 2013 02:59 AM)SHADOW REALM Wrote: [\[CITE\]](#) Holy jeez, Running EVERYONE as "Nobody" is so hopeless. Make it stop
I think he just meant the webserver is running as 'nobody', which is pretty standard.

(Nov 19, 2013 02:59 AM)SHADOW REALM Wrote: [\[CITE\]](#) 3. Disabling all php scripts that have their perms as 777 (<https://puu.sh/5mVNk/5b1e7a0f1f.png>)
Are you saying they deleted your PHP scripts that were CHMOD 777?

Mr. Singh - November 21, 2013, 1:46 am

runnin server as root is shiitest thing ever but i have much xperience in.hackin em but never say webserver runnin as root :/

Orgy - November 21, 2013, 1:46 am

(Nov 19, 2013 02:59 AM)SHADOW REALM Wrote: [\[CITE\]](#) I can guarantee it isn't premium
How can you guarantee this?

SHADOW REALM - November 21, 2013, 2:50 am

(Nov 21, 2013 02:43 AM)Orgy Wrote: [\[CITE\]](#) I stopped here. What?

Do you mean they're running their webserver as root?

I think he just meant the webserver is running as 'nobody', which is pretty standard.

Are you saying they deleted your PHP scripts that were CHMOD 777?

They have installed their WHMCS under the root account. So if someone hexed it than they would instantly have a r00t shell

Not just the webserver, every USER is now running as nobody, if you do id you will get UID 99 and GID 99

As for the php scripts, if they are chmodded to 777 you get the good old 403

(Nov 21, 2013 02:46 AM)Orgy Wrote: [\[CITE\]](#) How can you guarantee this?

1. It isn't insurance
2. They are probably adding a price on there but I wouldn't say it's a premium
3. There aren't any prizes

Orgy - November 21, 2013, 2:55 am

(Nov 21, 2013 03:50 AM)SHADOW REALM Wrote: [\[CITE\]](#) They have installed their WHMCS under the root account. So if someone hexed it than they would instantly have a r00t shell
Hexed? And under what root account? Are you saying that uid0 is the owner of the PHP files? That won't really make a difference, since the webserver is the one running the PHP files.

(Nov 21, 2013 03:50 AM)SHADOW REALM Wrote: [\[CITE\]](#) Not just the webserver, every USER is now running as nobody, if you do id you will get UID 99 and GID 99

What do you mean every 'user' is running as nobody? You sound confused here. Surely everyone doesn't have the same username 'nobody', or everyone would be logging into eachother's cPanel.

(Nov 21, 2013 03:50 AM)SHADOW REALM Wrote: [\[CITE\]](#) As for the php scripts, if they are chmodded to 777 you get the good old 403

Well that's just plain silly, though I don't see why you'd need to CHMOD 777, anyway.

(Nov 21, 2013 03:50 AM)SHADOW REALM Wrote: [\[CITE\]](#) 2. They are probably adding a price on there but I wouldn't say it's a premium

Considering 'quality' is a relative term, it's kind of hard to guarantee that they aren't offering a 'premium' service.

Yeh, UID 0 = What whmcs was installed under. Correct me if I'm wrong but can't someone just mod the PHP file to include command execution and then run commands as root?

Users have different names, e.g a28483, A4838294 and so on but when you create files they are ran as nobody (With the "id" command)

Yeak ik, but still. If someone wants to use a PHP script under 777 they should be allowed

Orgy - November 21, 2013, 3:04 am

No. It's going to run as whatever the webserver is running as.

(Nov 21, 2013 04:01 AM)SHADOW REALM Wrote: [\[CITE\]](#) Users have different names, e.g a28483, A4838294 and so on but when you create files they are ran as nobody (With the "id" command)

That's because they are being ran by the webserver, which is running as 'nobody'. There's absolutely nothing wrong with this, and it'd actually be very strange if they had a bunch of webserver running as each user.

(Nov 21, 2013 04:01 AM)SHADOW REALM Wrote: [\[CITE\]](#) Yeak ik, but still. If someone wants to use a PHP script under 777 they should be allowed

Why? Do you even know CHMOD 777 is?

I understand you're frustrated that they aren't processing your refund faster, but you're only ridiculing yourself, here.

SHADOW REALM - November 21, 2013, 3:13 am

read, write execute for everyone (777). I'm on my iPad at the moment and might get on my computer later so I can explain it better without taking 10 minutes to write a word

(Nov 21, 2013 04:13 AM)SHADOW REALM Wrote: [\[CITE\]](#) read, write execute for everyone (777). I'm on my iPad at the moment and might get on my computer later so I can explain it better without taking 10 minutes to write a word

Why would you want everyone to be able to read, write, and execute your files?

Monetization - November 21, 2013, 3:17 am

I've bought hosting where my PHP script wouldn't run under the permission needed, I usually just send em a ticket and they fix it.

crossings - November 21, 2013, 11:56 am

I was cheated too by this person HaX420 , I looked over the net for cheap Romanian hosting reseller service and <http://www.xhostfire.com/> looked very cheap. But this cost me 24usd and they refuse the refund . This is for search engines to find this post easier : HaX420 cheater , cheater HaX420 , cheater xhostfire.com , xhostfire.com cheater.

So what happent was simple, I registered to them, and my account is down since 4 hours now. I cannot acces my own WHM panel . HaX420 comes with this answer to my ticket "In the normal course of business, we expect there may be occasional problems. " . What do you think ? 4 Hours of downtime and still counting ! Professional answer, what can I say. Really, it is a big scammer xhostfire.com, scam xhostfire.com, scam HaX420 correct answer.

This is the first time I was cheated in my entire life. This is the picture with scammer HaX420 <http://postimg.org/image/6k4g1orpx/> .

I live in Romania, this guy is really in bad luck because I will press charges on Voxility company who provide the services (its a local Romanian company) and I'am sure they are going to take drastic messures because they did it before as I have noticed on local forum discussions.

I just read this, And thought 2 things... Your grammer is bad lol.

And, Your going to press charges over something on the internet of 24 Usd? Damn bro. Don't you think lawyers, Court fees and all that would cost more? Good luck on that. ?

D??M! - November 21, 2013, 12:04 pm

Generally when you sue someone you sue for damage done + legal fees.

Monetization - November 21, 2013, 12:06 pm

(Nov 21, 2013 01:04 PM)DOOM! Wrote: [\[CITE\]](#) Generally when you sue someone you sue for damage done + legal fees.

Generally when you press charges, It's a little bit different then suing.

Charges = A charge to be on a record, Followed by a fine.

Suing = A legal action to get some type of money from wrong doings.

Point taken, wasn't really aware of the difference.

What I'am following here is to cut the Voxility contract with this scam xhostfire.com. If me, which lives locally doesn't do a thing, who is gonna do it ? They will keep cheating people until they die. And let me tell you he will get fried this time, already got email reply from Voxility asking for suplimentary details in order for them to take messures. If for him \$24 worth the Romanian part of the business, that is his problem not mine.

It's only had some downtime, calm the fuck down.

DDos - November 21, 2013, 2:05 pm

(Nov 21, 2013 04:15 AM)Orgy Wrote: [\[CITE\]](#) Why would you want everyone to be able to read, write, and execute your files?

There are some files that needs to be 777 in order for some platforms to be able to change them. For example editing files from your wordpress admin panel requires some of the files to be with r/w/e permissions. Also some of the images in the upload folder in wp have to be 777 in order to be displayed correctly on the website.

So CHMOD 777 is very commonly used around.. A Hosting service that does not supports 777 and instead serves a 403 than its not a hosting service at all.

Hope this clears some things out for you.

This member SHADOW REALM! Isn't any hacker, he uses to get hosting there & then uploads a shell after hacking sites he simply asks for refund, he also tried to do same thing & disputed at paypal.com, be aware of this member named Shadow Realm etc.

Even any noob can learn from my tutorial how to hack websites being on same server haha.

The most basic techniques he uses, if you wish to know how the system works have a look here :p

<http://hackforums.net/showthread.php?tid=3769688>

@Hax420! I'm with you, I've a lot of proofs against this member & I'm going to invite escalate team to solve that dispute, let him dispute you as well on paypal.com ;)

Do I look like I care about all this shit you're talking ? Shadow knows what he's doing just because host are stupid and he exploits then isn't a bad thing it's actually pretty funny. Most the host deserves it because they don't know how to run a hosting company.
