sHoCkZ Crypter Scantime+Runtime Unique Stub source!

sHoCkZ Crypter is a Scantime+runtime Crypter three encryption Methods Rc4 , Aes , Xor this will provide you with lifetime updates such as updated stubs each client will recive 2 stubs every 2 weeks if you require any more the cost will be \$2.50 (per Extra Stub)

So you may be thinking well whats the features of it and what makes it special? The simplicity makes it special, There's nothing big in this crypter after all Whats the point in overloading a crypter it just makes it more unstable that's why sHoCkZ Crypter is so special it focuses on the main aspect (Being Fud) i mean yeah binders and icon changers are good but thats what make most crypters fail So i hope thats the features covered if not please pm me! now for the special aspects The Unique Stubs! this source was built for the power and for stubs to be able to last 2 weeks without being detected the public stubs Where off my old project that i made 5 week ago and are only 3/20 detected or something very little UD But That's the main focus on sHoCkZ Crypter i hope i have cleared all Questions if not please pm me.
