Thread: [How to Flip Your Cash | Make At least \\$100 Profit A Day | Fully Explained](#)

Cryptic™ - November 22, 2013, 4:29 pm

First of all, I'd like to say if your one of those people that Gamble BTC, or fall for those "double your BTC by gambling" schemes your an idiot. ?

Anyways, let's begin.

Well I've been doing this for the past 2 weeks since BTC values fluctuate like crazy now days, its easy to make tons of money.

This is pretty common sense but a lot of people don't know.

This week alone I've made over \$1600 (Mainly because I got lucky a few days ago when BTC crashed to \$375 each on BTC-E for around 15 seconds and I grabbed a bunch as I had auto buy setup for < \$400.)

Today I started at \$386 and turned it into \$543

Spoiler [\(Click to View\)](#)

How to do this?

Simply Register on <https://btc-e.com/>

Get some USD on your account.

A good amount to start off with would be at least \$100, but I would recommend at least \$300.

All you do is buy low sell high with BTC and you can make money in seconds.

--

Easiest way to Fund your BTC-E.com Account

If you live in the USA, you can do a bank transfer directly to BTC-E.com

Simply go to <https://btc-e.com/profile#funds/deposit/usd> and select Wire Transfer

You can also buy BTC from the [Currency Exchange](#) Section and deposit it onto your BTC-E.com and sell it for USD on the site.

There are also many other deposit options that can be found on <https://btc-e.com/profile#funds/deposit/>

--

Now let's move on,

Last Price: 707.02 USD Low: 615.03 USD High: 722 USD

If you bought earlier today at \$615, you'd be making about a \$100 profit by selling now.

--

How to setup AutoBuy?

Now we all know that we can not be sitting behind our screens all day watching BTC stats, so all you do is create a buy order when your not online.

For Example, the current price is \$707.1 but I can manually create a buy order for \$640 or less before I go to bed,

<https://i.imgur.com/f2FJJKr.png>

This way if the price does fall below 640 it will automatically buy it for me.

And I know for sure the value of BTC will be \$800+ one of these days, so you can make good profit by doing this.

Additional Information:

A good site to watch BTC value's live is at <http://bitcoinwisdom.com/markets/btce/btcusd>

If you have any questions just post them below and I'll answer them.

Everything is done instantly on site, you can sell on the site for USD which will automatically get added to your BTC-E account.

Not hard at all, you can always buy BTC from HF Members on the currency exchange section and exchange it on BTC-E.com for USD.

No BTC-E.com does not have any age restrictions.

All they ask you is for your email address to sign up.

The best thing to do when you cash out would be to sell your BTC-E USD on HF. People are willing to pay ~ 20-30% more for it on HF. If their large amounts people will buy it with WU or MG.

I always buy BTC-E USD from people on HF, so HMU when you get some. xD

No the fastest way would be just buying some BTC on HF via PayPal and depositing that BTC onto your BTC-E account.

BTC-E only let's you deposit with irreversible funds.

Yeah the problem is actually getting the BTC. I don't think my parents would be happy if I wire
money from my bank to this. I don't even know my bank details lol.

Perhaps I will try to get into this, although I missed my window of opportunity to fully capitalize on
this.

BTC-E is currently one of the biggest exchange sites. Of course they pay out...

But you can make more money selling the voucher for cash on HF. People are willing to pay upto 30% extra. Since it's so hard to buy BTC-E currency.

Different sites have their different market sizes. BTC prices vary depending on multiple factors, one of which is supply and demand.

I've been flipping with some dollars I couldn't withdraw anyway.

Made \$5 in a few minutes. Not a lot, but I only had ~43 USD on the account.

I personally use MetaTrader to keep track with the live prices and buy/sell quickly.
Go to Profile -> Meta Trader and open a MT account. Deposit your funds unto it and download the application. It's pretty neat.

BTC is now \$730, not \$630. I sold it too early, at around \$700. Bought LTC with it, sold it after a dollar increase.

Feels good.

Where can i find a free btc-e voucher code to get started?

Cryptic™ - November 24, 2013, 11:54 am

Paragöz Wrote:Have you ever sent them a wire?

I want to put some money on my account with wire transfer but I never trusted them as I read some bad things about them on bitcointalk...

Are they reliable?

Yes I have sent them wires before. But I usually just buy BTC at rates below the market rates on HF and sell that on BTC-E.

iNuke Wrote:Why rates aren't the same as preev.com?

Sorry I'm new to BTC.

Each site has it's own market value for such coins. They are generally a bit above or below the standard rates.

Just found 3.7 BTC in one of my Cryptic-Hosting wallets that I completely forgot about months ago. I was surprised it had so much when I logged into the wallet, I shit bricks lol.

I setup that wallet like 8 months ago and never logged into it since, since customers purchases were all automated.

I was exporting database backups and notice the words in the log, then I remembered I had a separate BTC Wallet for that.

Took all the coins and sent it to BTC-E and sold it at 759.99 ea.

It's been going up and down, back and forth. I had a sell for \$925 (considering what happened before, this would be soon), but I had to cancel it because it doesn't look like that will happen any time soon. I just sold for a lower price.

Hoping it'll dump just as I get on tomorrow. Litecoin is less predictable than ever. It's hardly following Bitcoin anymore.

Anyone here using MetaTrader? Is there a way to combine charts and get the price scale for the second on the left side of the window? Would be pretty neat.

I don't know about deposits, but I'm still flipping BTC (well, I was before the crash). I'm holding on to what I have because it's started to go up again.

Once LTC hits 50, I'll start flipping that as well. I bought when it was at \$14, and will buy more soon, once I get the funds. It's poised to go up.

That's not really worth much. To flip for good profits you need at least 200\$

He bro can i flip LTC also ?

is that possible. with 7 , and will i make profit how many :)

thanks

thanks

sure it is possible.

basically the more you invest the more you can make profit/loose.

just buy low sell high thats it.

My latest investments

Bought 1.03 BTC at 671\$ mid December

Bought 0.754225 at \$729 on the 28th.

Profits if I sell at \$800: \$129 (From the 1.03 BTC) and \$73 from the (0.754255 BTC)

I'm going to hold onto them till BTC hits ~ \$900 - \$1000

My current stock

Spoiler ([Click to View](#))

If anyone is selling any BTC-E USD I will buy all amounts. Shoot me a pm

At least until BTC is stable again.

You just literally stated the definition of investing. Buy low sell high. You don't even have to do this with Bitcoin. If you guys really want to make a killing, try Forex, Futures contracts, or Binary Options (be careful with these). Crypto trading on anything other than Bitcoin and Litecoin is almost a waste of time.

The majority of the people on this site are very young and don't have the capital to get into Forex/Contracts.

I have an automated system that does everything for me. I haven't touched it in about 6 months.

Somedays it make's ~ 30-40 and other days it make's \$100+.

The more money I put into it, the more potential profit it can generate.

Right now I have around ~ \$5000 in USD/BTC in the system that it trades with.

Imma have to try this, could use the extra loot.

Like a normal trade, there's still space for losses? Imma use your technique ?

sure if it is possible this way.

Yes there are losses, but BTC is just a waiting game, you will always recover.

It'll always go back up.

On March 5 Bitcoin was around \$395, I bought 4 coins that day, and added it to my system.

As of right now that's a \$92 profit, the system will sell them when BTC spikes up again, ~ the \$440/coin range and then rebuy when it drops.

I recommend starting off with at least 1 bitcoin, but if you can't afford that, at least \$100.

You mean you setup autobuy and autosell in btc-e and leave it running for months??

At what price point you set to autobuy and autosell?

It determines it all automatically. Data is extrapolated from a lot of the sources

It determines it based on the history of the past 7/14/30 days.

I'm not going to go in-depth as it would take far too much time.

It's a bot that takes data from various sources, buy and sells at certain price points.

I add more funds to it once in a while, that's just a matter of sending BTC to the wallet. The more BTC it has the greater the earning potential.
