Thread: [Alpacas Java Drive By Generator - Beta testers needed.](#)

Exzib - November 24, 2013, 2:13 pm

Hey guys, so I recently started working on a java drive by generator, I first made it in vb.net, which wasn't that functional, and I had trouble getting everything to work etc...

So, I made one in PHP and worked on it today.

Currently, it is in a pre-beta stage I guess, its in really alpha, I am not sure if it works good yet, how the infection rate is or whatever, if it works on all computers.. you know it.

Here is a current screenshot:

Yes, I know it looks plain, I am gonna fix a login system tommorow and set up the website (hopefully tommorow).

I will make it look much better.

So currently you can select a download link, then the name of the applet (the .jar/.class). Enter a site to clone and it will automatically put the applet in the bottom of the page.

I tested the actual jar on my own computer and it is working really good, I tried it on my laptop aswell and it works fine.

So If anyone is interested in beta testing it before it gets released, feel free to post here or PM me.

To-Do list:

Set up the server

Set up the website

Put it into beta testing..

Ask any questions here aswell.

m4dh4ck3r - November 24, 2013, 2:24 pm

I would like to beta test it for you .

~Tom~ - November 24, 2013, 2:24 pm

I'd be interested in testing this out.

xhflhkeuhwguu34 - November 24, 2013, 2:25 pm

I'd be happy to beta test and help you with the web interface.

L?c???? - November 24, 2013, 2:25 pm

Id be happy to test this out, looks nice man good job.

Natalie Dormer - November 24, 2013, 2:55 pm

Yep i'll help you for sure. Pm'ing you now

f1sh - November 24, 2013, 3:17 pm

Which version(s) of Java does this affect? CVE-2013-XXXX?

Alex™ - November 24, 2013, 3:43 pm

(Nov 24, 2013 04:17 PM)0xDE?DBEEF Wrote: [\[CITE\]](#) Which version(s) of Java does this affect? CVE-2013-XXXX?

A JDB is not an exploit mate, it's a feature.

Exzib - November 26, 2013, 1:38 am

Got some news.

Finally server is setup, I fixed everything to work and I tried it myself and it seems to work fine.

I will be doing some final touches tonight and give the link to the beta testers after that.

Will be finishing the form today to make it look better etc.

Darkwin - November 26, 2013, 1:47 am

Alpaca hook a nigga up though, I got you :)

killerxknight - November 26, 2013, 1:49 am

I Could help you beta test this if you still need beta testers.

SmokingFoe - November 26, 2013, 2:35 am

Would like to test it out for you if its still needed.

Thanks

SHADOW REALM - November 26, 2013, 2:37 am

I recommend adding a "Last 10 Visitors" page in there, Record their IP's and Useragent and so on to determine infection rates

TreeChar - November 26, 2013, 3:06 am

Can I be the beta tester?

I have some hacked sites from where I Can get traffic.

Exzib - November 26, 2013, 3:28 am

(Nov 26, 2013 03:37 AM)SHADOW REALM Wrote: [\[CITE\]](#) I recommend adding a "Last 10 Visitors" page in there, Record their IP's and Useragent and so on to determine infection rates

What do you mean?

Last 10 executions or what?

SHADOW REALM - November 26, 2013, 4:40 am

(Nov 26, 2013 04:28 AM)Alpaca Wrote: [\[CITE\]](#) What do you mean?

Last 10 executions or what?

yesh, like if a fireflx browser visted and downloaded it, it would show up with the firefox useragent

P???ce - November 26, 2013, 6:56 am

I would love this too :D let me test this as well ;)

[H]ell - November 26, 2013, 7:28 am

What CVE numbers did you include? Would like to know :)

Magician. - November 26, 2013, 7:35 am

Are you going to release this free ? Looks nice BTW

BigDickBandit - November 26, 2013, 8:54 am

I would love this too let me test this as well ;D
Let me know once it is done

Thanks!!

DarkRouter - November 26, 2013, 10:50 am

Send me a private message , i can do most of the things you need.

m4dh4ck3r - November 26, 2013, 11:09 am

You are very very evil Shadow Realm.

Exzib - November 26, 2013, 2:07 pm

Unfortunately Alpaca Drive By will be delayed for a while, having issues with my server.
In the meantime, here is a picture of the site:

Havent got time to fix it all up yet, but will when server is up and running.

It should be up and running soon tho..

Instead of charging any amount of money for your product, how about you give some technical information.

Which exploits did you implement? Give a list of CVE numbers..

Exzib - November 27, 2013, 9:10 am

I mean, its not an silent JDB (havent implemented that yet, will add CVE-2013-2423 tonight hopefully).

I currently have latest JRE, Version 7 Update 45, and It works like a charm on my computer.

Also, I am pretty new to this Java drive by generator business so it wont be perfect at the start.
Anyway, beta is up, will be PMing a few of you.

Edit: Beta is in full testing, here is a picture of the generator:

Edit: Beta is in full testing, here is a picture of the generator:

So why would you sell a software that requiries the user to be of full knowledge a harmful application will be executed on their computer, for \$15 a MONTH?

That really doesn't seem fair.

Exzib - November 27, 2013, 10:19 am

TBH I have no idea what you are talking about, Java Drive Bys are good and is a good spreading method, Used if for ages and stills works like a charm.

It also seems like you don't know what you are talking about and you don't read my replies to the fully, I will be installing a SJD soon.

Please be kind to leave my thread, I'd appreciate that,
?

As the seller of the the first and I think still one of the largest java drive by's I am quite sure what I am talking about.

<https://hackforums.net/showthread.php?tid=1083487>

Project has been dead for over a year due to personal reasons.

Anyhow, I think you really should learn a bit more about the market you are entering.

Please read: <http://www.java.com/en/download/help/appsecuritydialogs.xml>

The silent java driveby's only work for java Se 7u24 and lower. And even than execution rate is quite low.

I am not here to offend you or your product, I am just trying to gain more knowledge of what you're

making. If you were to stand for your product. You wouldn't mind the questions and would be able to answer them.

Anyway, this is a TRADITIONAL JDB, just like Epic Java, JSerie, GalaxyJDB and any other jdb generator.

There other jdb generators also provide with silent jdb exploits, which I stated I will include soon. (CVE-2013-2423).

[H]ell - November 28, 2013, 7:22 am

CVE-2013-2423 only affects JRE7u17 and the ones before that.

The JRE is currently at 7u45. So you implement a exploit that is 28 updates behind?

Exzib - November 28, 2013, 7:33 am

Yes, and this is the CVE that the other JDB generators are using, so please go thrash their thread, I didnt ask for your fucking opinion nor you to post and flame my product here, please dont make another post after this.
