Minimum investment to earn 50/day around \$20. It can be rinsed and repeated. The profit is in BTC but can be transferred to pp straight away.

I'm certainly interested but if this is simply utilizing Crypto Coin exchanges to sell high / buy low among different crypto's, well unless you devote hours to that daily you do not make much. Also the Cex.io referrals are great but they have been dropping peoples accounts for what they consider advertising or spamming your referral links. If you can refer people to CEX.io with your referral link, you get 3% of any In the Cloud hashing power they buy.

The best marks for this are the people in your life who know nothing about Bitcoins but want them, to get involved or to "mine" them, you point them to your referral URL and your good to go. You will really only make a decent amount of money doing this if you sign up people who plan on buying a lot of in the cloud hashing power. Obviously there are thousands of other ways to spread the the links but that's up to you folks. If the methods in this ebook are simply pulling in bonus ghs from cex signups and day trading cryptos, i'll pass but if there are some amazing unknown monetization techniques that most of us in the BTC and Crypto Currency hacking community have not heard of I'd be very interested.

Any hints if there are methods differing from those I mentioned in the ebook would be appreciated so i know im not wasting the tiny bit of money left in my wallet =[

GLWS and let me know if you plan on updating the ebook as I have come up with a lot of different methods and exploits regarding BTC and obtaining high amounts of BTC for little to nothing, pm me for details if your interested in collaborating and sharing some knowledge.
