Thread: [\[TuT\] How to INSTANTLY Customize your Mac Address](#)[\[TuT\]](#)

NoodleBot™ - November 27, 2013, 6:40 pm

Welcome to my short tutorial on how to instantly and securely change and customize your computer systems MAC address.

What is a MAC Address?

- https://en.wikipedia.org/wiki/MAC_address

Steps

Download the script
Run the script as administrator
Follow the instructions on screen
Enjoy.

Download <http://ge.tt/api/1/files/9s4F2772/0/blob?download>

Additional information:

Why do I want to spoof or change my MAC Address?

-

Your ISP uses MAC address to identify or authenticate your Internet connection. So in case your network card goes boom, the new card you replace it with will have different MAC address and so the Internet wont work. So changing the MAC address to old network adapter is the quickest fix instead of telling your ISP to register your new MAC address which may take lot of time.

If you want to access a network, which limits access based on MAC address, from another machine then you can change MAC address to the one for which you have access. Note that only one computer would be able to access the same network (no two computers can have same MAC address on same network to access it without any problem)

A very important reason is privacy. Your MAC address can be seen by everyone on the local

Ethernet network using many simple tools. A hacker on local network thus can track machines (and thus you) on the network. This is especially a threat when you are on a wireless network and are using a public WiFi network like in coffee shops, hotels or airports.

If your original MAC address is revealed, an hacker can use it to impersonate you! On many networks (wired or wireless) access is restricted based on MAC address to avoid access to unauthorized devices on the network. So, when you go offline, someone can use your machine's MAC address and access the network as 'you'.

You can get a new IP address lease from DHCP server by changing MAC address. On many networks, DHCP lease is set to last many days or is associated directly with a MAC address such that you get the same IP address all the time.

Note:

This MIGHT produce an "Access denied" Error on changing one of your MAC's.

If you in fact run the script again you will see that it has actually successfully changed your address, however.

Enjoy.

Private666 - November 27, 2013, 6:45 pm

Nice tutorial checked it out works great nice release.

warlock994007 - November 27, 2013, 6:51 pm

It is a great TuT but it can be done with more customised Form

NoodleBot™ - November 27, 2013, 7:08 pm

By more customizable, you mean more GUI.

The script will detect what operating system you are on and configure that automatically, you just provide the fake address you desire.

;)

The whole thing only takes 2 seconds, it's not supposed to be pretty.

wothacks - November 27, 2013, 7:25 pm

Vouch for this working perfect, always comes handy when they mac banned you.

Mochizuki6661 - November 28, 2013, 2:01 am

Great Tutorial! Thank you so much for sharing!

133720 - November 28, 2013, 2:04 am

Great Tut.I will do next time with your method.
Thanks for sharing.

warlock994007 - November 28, 2013, 3:06 am

I Agree with you, nothing is better than consoles.

bren1337 - November 28, 2013, 3:15 am

Anybody vouch for this? is it legit?

mistix - November 28, 2013, 6:03 am

this is a nice tut
this can help you alot to stay hidden while browsing

snorlaxlowelz - November 28, 2013, 4:39 pm

why not just login to your router and do it the proper way?

evilpineappe - November 28, 2013, 5:07 pm

Does anyone know how to do this when using a mac?

NoodleBot™ - November 28, 2013, 6:34 pm

(Nov 28, 2013 05:39 PM)snorlaxlowelz Wrote: [\[CITE\]](#) why not just login to your router and do it the proper way?

Because you don't need to log in to anything to change your MAC address.

That would be your be only your LAN MAC address anyways.

JexedM8 - November 28, 2013, 6:47 pm

I believe that there's software for this that has existed a long time.

NoodleBot™ - November 28, 2013, 7:16 pm

(Nov 28, 2013 07:47 PM)The776product Wrote: [\[CITE\]](#) I believe that there's software for this that has existed a long time.

The point is to be able to know how without software.

00australia00 - November 28, 2013, 8:06 pm

TMAC is the best mac changer i know

Supreme??????? - November 28, 2013, 8:07 pm

Nice tutorial. Very informative. Thanks for sharing OP!

Quick Maths - November 28, 2013, 8:29 pm

I've tried doing this and have seen it not do anything?

Mind pming me with more instructions, i've followed them as they've said but nothing has occured.

NoodleBot™ - November 28, 2013, 9:08 pm

You just run the script and it will show you your current MAC address for each network driver you have installed, and give you option to change it.

You must be hitting enter and skipping both (or more if you have additional network cards) menus or something.

flyman1234 - November 29, 2013, 9:59 pm

always wanted to be able to do this thanks for the tutorial mate

Primrose - March 3, 2014, 5:28 pm

I'm on Windows 8 and it keeps crashing before it even opens and yes I'm running it as admin

NoodleBot™ - March 3, 2014, 5:35 pm

Unfortunately this is unsupported by Windows 8. Try running it in windows 7 mode, however I don't have win8 so ldk.

You may also try if on windows 8:

How to Spoof your MAC Address

I????? - March 3, 2014, 10:55 pm

Thanks for this bro :) I'll try it out!

Not sure why, I open it and it closes saying its not responding instantly. It just shows up saying it has stopped working and loading then closes.

NoodleBot™ - March 15, 2014, 2:19 pm

Not sure why, I open it and it closes saying its not responding instantly. It just shows up saying it has stopped working and loading then closes.

If you have an antivirus on your system, you might have to right click the file>Go to properties and select the "Unblock" option.

NoodleBot™ - December 17, 2014, 9:50 pm

I have updated the download link. Everyone, feel free to use this and I hope I stop seeing MAC address threads.

LynS - December 17, 2014, 11:38 pm

Thanks for the tutorial . this will really help many people ?

TheSkiFresh - December 18, 2014, 3:44 am

Very good tutorial, tried it myself and it worked nicely :)
