Thread: [Getting adobe flash video from website and putting it onto shockwave flash component](#)

unSatisfied - November 28, 2013, 8:06 pm

I need help getting a video that is played through adobe flash on a website. The website is <http://noobroom9.com> and i want to be able to get the movies video and extract it onto a form. You will not be able to see this webpage unless you have an account already (lots of people do). If you think you can help, i will send you a invite to create an account for the website. All help is appreciated, people who help will receive vouch copies of the program once it's finished.

EDIT: The file name for the movie is 0.flv. So, if the URL was <http://noobroom9.com/?2542>, how would i get the shockflash to play it? Or windows media player? I dont care which as long as i can get it working!

That's pathetic. You're wanting to be spoonfed code so you can turn around and sell it. Unless you don't mean you're selling it, and you misused the definition of vouch copy.

I was going to release it for free.... and as in 'vouch copy', meaning you get to be a beta tester. I should have specified, sorry. No need to be so rude either, this comment isn't helping me at all so..

<ComponentName>.Movie = "http://url-of-website.com/file.flv";

The Movie parameter needs an flv file or an swf file, I believe.

Ok so i figured out the movie file is always 0.flv, however, i tried <http://noobroom9.com/?2537/0.flv> and it did not work. <http://noobroom9.com/?2537> is the link to the webpage of the movie and /0.flv is what you said to add. Please help.

It redirects to a login page, so I imagine you need a session active.

Try logging in with a WebBrowser control, and then navigating to the page with the WebBrowser, and using WebBrowser.DocumentText to get the movie?

and using `WebBrowser.DocumentText` to get the movie?

Oh, i have it automatically login and navigate to the webpage. After that, i have a button that tried to set the movie = the URL/0.flv. Getting the movie name isn't the issue, the issue is getting it to show on my shockwave control

Flash vars might be one of your problems, check the phallus modulator.

Only3 - December 2, 2013, 4:44 am

i have done # downloader b4 the problem is to found the stream link which is very hard now cuz he change it lots

thats why the site was down b4 and have problem with the hosting
