Thread: [\[2/5\] Red Hat Update for Multiple Packages](#)

Omniscient - May 2, 2007, 1:42 am

Red Hat has issued updates for multiple packages. This fixes some vulnerabilities and security issues, which can be exploited by malicious, local users to perform certain actions on a vulnerable system with escalated privileges or to gain escalated privileges, bypass certain security restrictions, and cause a DoS (Denial of Service), or by malicious users to bypass certain security restrictions and malicious people to spoof emails, cause a DoS or potentially compromise a vulnerable system.

Be sure to check if your system is missing security updates or have insecure applications installed: http://secunia.com/software_inspector/

Feature Overview - The Secunia Software Inspector:

- Detects insecure versions of applications installed
- Verifies that all Microsoft patches are applied
- Assists you in updating your system and applications
- Runs through your browser. No installation or download is required.
